

VAPROBATTEN™ + VAPROVENT STRIP™

Breathable Vinyl Batten System For Rain Screen Applications

VaproBatten is a breathable vinyl batten system for rain screen applications. Its unique and innovative design is a direct replacement for pressure treated plywood or treated lumber furring/battens. Combined with WallShield, this system creates a very effective simple rain screen design.

VaproBatten advantages include:

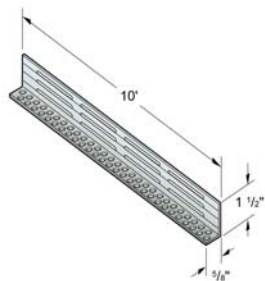

1. Unique air cavity allows building to dry in the event of moisture penetration.
2. VaproBatten will not rot, twist or warp.
3. Eliminates the need for stainless steel fasteners.
4. Produced from recycled material.
5. VaproBatten used with WallShield™ and/or WrapShield™ creates a breathable wall cavity system.

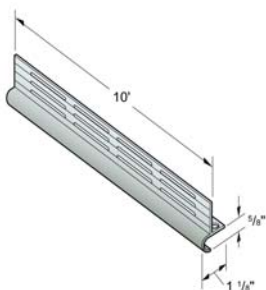

VaproBatten and VaproVent Strip Recommendations for Batten to Structure Assembly

Screw application	Yellow Zinc
Manufactured lengths	10' - 0"
VaproVent Top Strip	10' - 0"
VaproVent Hook Strip	10' - 0"

NOTE:
The type of siding/cladding will determine the type and frequency of fasteners used to attach cladding and siding.

VaproVent Top Strip (perforated) top installation, ensures maximum ventilation within the drying cavity; prevents insect invasion

VaproVent Hook Strip bottom installation ensures maximum ventilation, drives water along hook channel to vacate at wall end
