

Architectural Solutions Specification Guide

Availability

Electronic price list updated with release 204.B (U.S.) and 158.B (Canada), dated April 20, 2026.

All specifications subject to change without notice. Reference the electronic catalog/Hedberg for current pricing.

Transitional products in this specification guide are **maintained for existing customers only** and are likely to be phased out over time. These products are indicated with a . Products that are scheduled to be culled are indicated with an , followed by the last order entry date.

Surface Materials

The surface materials team has announced the launch of the Finish Library, found at www.steelcase.com/finishlibrary/.

For Canadian Pricing

- Canadian factor can be found at www.steelcase.com/CADpricing/. Calculate in the following order to avoid rounding errors:
- Multiply the base price and each option by the Canadian factor.
 - Round each to the nearest dollar.
 - Add base and options for total list price.

Ten Tips: How to Get the Most Out of This Book

Tip 1

Watch the tabs on the right-hand edges of the pages. They'll always indicate which chapter you are in.

Tip 2

Use the Statement of Line pages for an overview of the available components, their sizes, and page references for additional information. Each *Understanding* chapter includes a statement of line after the table of contents.

Tip 3

Find cross references by looking for page numbers flagged with an arrow.

Tip 4

Study the product detail pages in the *Understanding* section to learn everything an expert knows about specific products. Each product detail page in this section contains the following features, where applicable:

- Product Drawing
- Actual Dimensions
- Product Details
- Connections
- Wiring and Cabling
- Surface Materials
- Application Topics

Product Drawing

shows you what the product looks like and points out important features.

Product Details

gives specific information on the product and how it is used.

Connections

describes how the product is assembled or how it attaches to another product.

Actual Dimensions

table lists the dimensions of the product.

Wiring and Cabling

details the power and cable-management and cable routing capabilities of the product.

Surface Materials

lists what material is used for each part of the product.

Tip 5

Refer to the specifying pages for all the information needed to order a product. Each product specifying page contains a variety of elements to help you complete a specification:

- Product Drawing
- Standard Includes
- Required to Specify
- Options
- Related Products
- Specification Information
 - Dimensions
 - Style Number
 - Price

Standard Includes
(under the red or dark grey band) provides a list of what comes standard with the product.

Required to Specify
(under the red or dark grey band) itemizes the information that you must provide to order the standard product and the preferred sequence for specification.

Specification Information
(under the teal or light grey band) provides product dimensions, style numbers, and prices for the standard product and any surface material choices that are available.

Product Drawing shows you what the product looks like.

Product Drawing

Standard Includes

- Standard horizontal frame package with thin trim
- Standard horizontal frame package with thin trim
- Standard horizontal frame package with thin trim

Required to Specify

- Standard horizontal frame package with thin trim
- Standard horizontal frame package with thin trim

Standard horizontal frame package with thin trim	No cost	Specify with thin trim
Standard horizontal frame package with thin trim	No cost	Specify with thin trim

Tip 6

Required to Specify

Specify with Customiz Stain

Italic typeface on specifying pages usually identifies wording that you should use in your order.

Tip 7

To determine how many skins are needed to complete a panel, consult the table at the right.

Tip: Remember to order skins for both sides of the panel buildup.

Watch for tips throughout the text that give you explanations and helpful instructions.

Tip 8

Learn what you cannot do by looking for drawings crossed out with an "X."

Tip 9

Use the surface materials listings in the Surface Materials section of this book to find surface material color numbers.

Tip 10

Style Number	Page
TS7042BL	131
TS7042S	130
TS7048BL	131
TS7048S	130
TS7060BL	131
TS7060S	130
TS7072BL	131

Refer to the style number index when you know a style number and you need to find the page that has more details about the product.

Additional Resources

Architectural Solutions

are supported with informational materials, tools, and software to help you plan, specify, and order an installation efficiently.

Product brochures and planning tools can be ordered through your Steelcase area office by calling 1.800.784.0358 or through the Marketing Resources web site at village.steelcase.com.

Printed Materials

Surface Materials Reference Manual

This publication provides:

- An explanation of the surface materials
- "Available on" matrices
- Vertical surface fabric and seating upholstery selection listing
- Technical data for surface materials
- Surface material care and cleaning instructions

Computer Tools

Electronic Catalog

Accurate sales quotations and purchase orders for Steelcase products are created with specification software that uses Steelcase Electronic Catalog data. Use the data to specify and price style numbers and options for every Steelcase product. The data is updated bimonthly by Steelcase and provided to software programs including: the Hedberg Business System, SmartTools—Steelcase's design and specification software (for more information on SmartTools, please email SmartTools@steelcase.com), the ProjectMatrix ProjectSymbols libraries, as well as 20-20 CAP Studio.

Furniture Symbol Graphic Data

Steelcase creates 2D and 3D furniture symbols (with attributes) for planning and initially specifying Steelcase products. This data is incorporated into several add-on software packages that work in either a Microstation or an AutoCAD drafting environment.

For more information about these and other software tools to help you plan effective work environments, please email fsl@steelcase.com.

Digital Publications

You can access these digital publications at www.steelcase.com or village.steelcase.com.

Architectural Solutions Product Training

Basic training for the products included in the Architectural Solutions product portfolio is available as part of the Building Product Muscle (BPM) curriculum on the Steelcase University Web site at village.steelcase.com.

The four BPM modules are Web-based, interactive courses filled with pictures, detailed positioning, statement of line, and feature benefit information, as well as practice exercises designed to build salespeople's knowledge of the products. The BPMs also provide printable job aids of all content covered in the courses to serve as ongoing performance support. The available courses are:

- Privacy Wall—SAL271
- Architectural Solutions Low-Profile Floor—SAL243
- Architectural Solutions Modular Power—SAL245

Additionally, there are two courses available to help improve your understanding of how to position the advantages of an Architectural Solution with potential clients: Architectural Solutions—SAL242 and The AS Value Proposition—SAL258.

Support

Steelcase Capabilities

Steelcase products are distributed, installed, and serviced through a network of more than 600 dealers worldwide. Steelcase is also represented with offices and corporate showrooms in 26 U.S. cities, 4 Canadian cities, and in France, Germany, Great Britain, and Japan. Every Steelcase product meets our exceptionally high standards of quality and durability and comes with the Steelcase assurance of excellence in service.

For ordering or product assistance, please call your local dealer, the Steelcase Solutions Resource Team, or the Steelcase Solutions Fulfillment Team at 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com or contact your regional Architectural Dealer Sales Consultant.

Call the Steelcase Solutions Resource Team prior to placing an order, when working on a bid, or when you need information about product applications and specifications.

Call the Steelcase Solutions Fulfillment Team if you have submitted an order to Steelcase and you need to speak to your Solutions Fulfillment Team Representative about the order. Also call if you have any post-shipment quality concerns or service parts questions.

For warranty information, please go to <http://www.steelcase.com/warranty/>.

Outside the U.S.A., Canada, Mexico, Puerto Rico, and the U.S. Virgin Islands, call 1.616.247.2500.

For information about Steelcase, the name of your nearest Steelcase dealer, or for product literature, call 1.800.333.9939, or visit our Web site: www.steelcase.com.

Sustainability

At Steelcase, we believe business can be a force for good. We create long-lasting products that are better for people and better for the planet. Our products and operations use life cycle thinking to meet our commitment to reducing climate change. This commitment is reinforced by practices such as designing to minimize global warming and other life cycle impacts, ensuring material health, and enabling end-of-use strategies. To learn more at a corporate level, visit: <https://www.steelcase.com/discover/steelcase/esg-overview/environmental/ProductEnvironmentalProfiles>, which provide key environmental attributes such as recycled content, embodied carbon and recyclability, as well as product certifications can be found by searching for Steelcase at *Origin.build*.

Solid and Clerestory Wall Panels

Including Glass Selections Clerestory Panels

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Privacy Wall solid and clerestory wall panels

create floor-to-ceiling walls, prefabricated to the height and width dimensions you specify.

These panels, which offer power and communication capability, can be relocated to respond to changing needs.

► Specifying, page 90

Hollow core panel

enables wiring and cabling to be routed within the panel. Clerestory wall panel is only available with hollow core.

Enhanced core panel

has an insulated core to afford greatest acoustical performance. Use with overlapping ceiling track to realize maximum results.

Integral slotted verticals

allow for panel-supported furniture. Integral slotted verticals start above the base and run to a height of 84". Slotting will support components that are designed to hang on Answer and Kick, including universal storage and worksurfaces.

Adjustable levelers

allow panels to be installed on uneven floors.

Floor track is unitized to the panel to receive base trim and provide visual and acoustic separation at the floor.

Tip: When installing on low-profile floor, specify universal floor grippers.

► Page 204

Recessed or overlapping ceiling track is available.

Post extensions are available in two versions to accommodate both types of ceiling tracks.

Feature strip joins panels to posts, adapters, and other adjacent components.

Surface is steel, available in paint, fabric, or marker-board. Clerestory wall panels includes glass at top portion.
Tip: Vertical surface is not Greenguard and Indoor Advantage certified.

Power and communication outlets can be located in the panel face and/or in the panel base. Receptacles and cover plates are ordered separately.
Tip: Power and communication is not available in 2 1/2"H base trim.

Continuous base trim, ordered separately, is added in the field.

Product Details

Solid

Clerestory

Solid panel height can be specified from 89"H to 120"H in one-inch increments while clerestory panel height can be specified from 89"H to 120", in one-inch increments, to accommodate different ceiling heights. Clerestory panel height glass can range from 36"H to 111"H above finished floor (AFF).

Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Ceiling track allows +/- 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment to accommodate variations at base.

Floor track allows 3/4" of vertical adjustment with the 5"H base while the 2 1/2"H base allows 1/2" of vertical adjustment to accommodate variations at base.

Standard solid panel widths range from 6"W to 60"W in $\frac{1}{16}$ " increments.
Tip: Panels with enhanced core do not exceed 48" in width.

Modular solid panel widths range from $6\frac{11}{16}$ "W to $58\frac{11}{16}$ "W in 1" increments.
Tip: Panels with enhanced core do not exceed $46\frac{11}{16}$ " in width.

Tip: Modular wall panels are $\frac{15}{16}$ " less in width than standard wall panels.

Width of panel is measured to center of joint between two panels.

Modular panels used with adapters allow centerline planning. In the example above, two modular panels allow the distance between the centerline of the two parallel walls to remain at 12'0".

Modular panel widths are slightly smaller ($\frac{15}{16}$ " less) than regular panel widths so that when a corner condition is created, the overall dimension remains unchanged. All other features of modular panels are the same as standard panels.

Continuous base trim, ordered separately, is 5"H or $2\frac{1}{2}$ "H and available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

Base trim fits into position at the bottom of panel surface above the floor track.

Finished-end adapter is available to finish the exposed end of a run of panels. Adapter adds approximately $\frac{13}{16}$ " to the length of the wall.

Panel end cut kit connects a cut panel to another panel in line. It restores leveler and housing that is removed when panel is cut on site. Kit includes trim piece to finish the cut side of the panel and to enable feature strip connection to an adjacent panel.

Tip: Hang-on components are not allowed on cut panels.

► Page 67

Different surface materials can be applied to opposite sides of the panel. For example, you can have markerboard applied to side 1 and fabric applied to side 2.

Tip: Markerboard surface is available in a maximum width of 48".

Ceiling track bypass cover is available to conceal cable or conduit routed next to a recessed ceiling track as the conduit travels from the ceiling into a wall panel.

► Page 57

Acoustic packing is available to improve the acoustical performance at mini ends and wall channels. Each 120" length of acoustic packing provides enough material for three mini ends at 10' ceiling height.

Solid and Clerestory Wall Panels, continued

Connections

Feature strips, ordered separately, join panels together. Strip prevents light and sound leaks and can be cut to allow access to the integral slotted verticals. To rearrange panels, painted and anodized feature strips can be removed and reused. Fabric covered feature strips cannot be reused, and will need to be replaced as part of rearrangement process.

► Page 72

Tip: When using adjacent markerboard panels, specify the shared feature strip in a black painted or anodized finish. Black painted strips will conceal marks on surface. Anodized surface will allow markers to be cleaned from surface.

For Clerestory panels, you can specify two different feature strips when the solid-panel finish is different from the upper-glass frame finish.

Furniture reveal strips, ordered separately, are positioned between two sections of in-line feature strip to allow access to one set of panel slots when a single component is mounted on a Privacy Wall panel. When components are mounted side-by-side, both sets of slots are left exposed, and there is no need for a furniture reveal strip. Furniture reveal strips are painted to match the adjacent wall panel or to match the component bracket.

Tip: Use of hang-on components with enhanced core panels may reduce acoustic effectiveness.

Ceiling track, ordered separately, joins the top of wall panels to the ceiling. Ceiling track is available recessed or overlapping.

► Page 56

Integral slotted verticals accommodate any hang-on component that will hang on Answer or Kick panels, at any height in 1" increments up to 85".

► See *Storage Specification Guide*.

In some cases it may be desirable to hang components from the face of a solid panel, rather than connecting to the slots in the vertical edges of the panels. The solid panel construction is not adequate for fastening directly to the face of the panel. In the cases where a surface mounting solution is desired, load bars can be specified to provide additional support at the panel face. Mounting hardware can be screwed to the load bar without any damage to the panel surface.

Load bars engage with panel slots and can be mounted at 1" increments. They are specifiable in widths from 18" to 60", in 1/16" increments for standard configurations and in 1" increments for modular configurations. Load bars should be specified in widths to match the panel(s) from which they are hanging. Load bars can be specified in standard or modular sizes to match their corresponding panels. Modular wall panels are 15/16" less in width than standard wall panels. Load bars can be used with solid or clerestory panels.

Tip: Use of hang-on components with solid panels may reduce acoustic effectiveness.

A single load bar can span multiple panels and can also be mounted side by side.

It is recommended that load bars and panels be planned in a narrow enough width to keep them concealed once the components are mounted.

Tip: Load bars are equal or less than the width of the mounted component.

Load bars are used in sets of two and can be spaced apart as needed to accommodate the equipment to be mounted to them. For smaller monitor mounting brackets, load bars can be spaced 1" apart.

When hanging a larger conventional caseload cabinet that is designed to mount with cleats, load bars can be used. In these applications, the load bars would be positioned to align with the cleat hardware that is included as part of the cabinet design. Load bars are not designed to support cabinets that are deeper than 18".

Load bars can be mounted at a maximum height of 85" AFF (Above Finished Floor) and a minimum height of 12" AFF (Above Finished Floor). Two load bars can support a maximum of 650 pounds. When a single load bar is installed at a feature strip, a furniture reveal strip should be installed adjacent to the load bar.

2-way, 3-way, and 4-way posts join panels in in-line, L-, T-, X-, V-, and Y-configurations without blocking access to integral slotted verticals.

► Page 70

Adapters connect panels in L-, T-, and X-configurations without adding extra creep to panel dimension.

Tip: Adapter blocks slotted verticals in panel edge of some panels.

► Page 68

Mini end connects a panel or panel run to a perpendicular building wall. Elements of the mini end telescope allow a limited range of dimensional adjustability. Mini-ends come in small, medium, or large.

► Page 62

Edge Premium Markerboard products

can be surface mounted to Privacy Wall by clipping into panel slots. All mounting brackets and hardware are included with each board. In addition to bracket mounted boards. Application rules, guidelines, and specification information can be found in the *Collaborative Surfaces Specification Guide*.

Wall channel connects an uncut panel to a perpendicular building wall. Wall channels come in small, medium, or large.

► Page 64

Solid panels can be cut on site to conform to building walls and ceiling details including sills and bulkheads.

Specify an end filler cut kit when cutting a panel into a wall channel. The end filler cut kit includes a wall channel and a spreader.

Cut edges of cut panel can be finished with field-cut wall channel.

End filler cut kit combines a wall channel and spreader into one assembly. Kit is used when cutting a panel at a perpendicular building wall.

If required, I-Line interface post can be found in Service Parts (**1571843SR**).

Universal floor grippers

are designed for use with Privacy Wall panels that are placed on top of Low-Profile Floor. The universal floor gripper fits underneath the panel floor channel and glides to evenly distribute weight on the floor. When used with double-sided adhesive tape, the universal floor gripper will also prevent movement on hard surface floors like tile, wood, or terrazzo.

Tip: Universal floor grippers must be specified when installing in accordance with ICC Compliance Report.

Panels which are configured for 2 1/2"H base trim are not compatible with the universal floor gripper. Panels that are required to be secured to the floor must be directly anchored to the floor with conventional fasteners.

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Solid and Clerestory Wall Panels, continued

Wiring & Cabling

Hollow core in panel enables both vertical and horizontal cable routing within panel.

Panels with enhanced core do not allow for vertical cable routing. Cable can be routed laterally at the base.

Solid hollow core Privacy Wall panels can be specified with factory-installed powerkits. Powerkits include a power block and an installation cage. Field-installed powerkits are also available.

Power blocks will be factory installed in center of panel to accommodate either power receptacles only or power and communication receptacles. A single power block can be specified to allow receptacles on one side or both sides of the panel.

Tip: A maximum of two power blocks are allowed in the panel surface for each surface, however, the cutouts cannot exceed two different cutout positions. If surface 1 has two cutout locations, surface 2 cutout location(s) must be back-to-back to match surface 1 locations(s). If side 1 has one cutout location, surface 2 can have the cutout in a different location.

Power receptacles

Power and communication receptacles

Cover plates, ordered separately, accommodate power receptacles and communication faceplates. Cover plates are used in panel face only.

Base-height power block will be factory installed in center of panel. A single power block can be specified to allow receptacles in one side or both sides of panel. Base-height power is available in both hollow core and enhanced core panels.

Tip: Base height power is only available with 5"H base.

64"

Power only

Power and communication

Communication only

Chicago power receptacles

Chicago power and communication receptacles

Base trim, ordered separately, is 64"W and available in five versions— power only, power and communication only, Chicago power, and Chicago power and communication.

Width of panel must be adequate to accommodate cutouts.

- 30"W–60"W for standard panel
- 28.657"W–60"W for modular panel

Power and Communication

Power receptacles are ordered separately and installed on site. They are coded to indicate which circuit and type of ground they engage.

► Page 80

Controlled receptacle must be indicated when tying into the building management system. Duplex receptacles have an option for a factory permanent, pad stamp power icon symbol with the word controlled per compliance with the Energy Code.

USB receptacles are ordered separately and installed on site. They are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampere of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

Communication receptacles are provided by others and installed on site. They can accommodate single-gang NEMA-style faceplate, snap-in modular furniture-style faceplate, or Decora mounting strap style.

Solid height location

Clerestory height location

Maximum two locations and base

Receptacles in solid or Clerestory hollow core panels can be specified in any combination of base and surface height location(s).

Tip: A maximum of two power/communication locations are allowed in the panel surface for each side, however, the cutouts cannot exceed 2 different cutout positions. If surface 1 has two cutout locations, surface 2 cutout location(s) must be back-to-back to match surface 1 locations(s). If surface 1 has one cutout location, surface 2 can have the cutout in a different location. Minimum height of power/communication location is 21" AFF. If another power/communication location is required, the minimum height would be 28" AFF. The maximum height for power/communication would be 9" down from the height of the solid panel or 9" down from the height of the clerestory glass.

Utilities can be specified on either side of the panel or on both sides. Receptacles can be installed on either side of the panel or on both sides. Fillers can be installed in any unused cutouts.

Infeeds can connect power blocks to building power in the ceiling or floor. Factory-installed infeeds extend a minimum of 12' from the panel.

Modular harnesses and harness-to-harness connectors can be used to extend power to a power block from another power block in an adjacent panel.

Wiring schematics are available to accommodate a wide range of building types and power needs. 15-amp and 20-amp systems are available in 4-circuit, 3+1; 4-circuit, 2+2; and 3-circuit with separate neutrals. All of these choices are supported with a system ground and isolated ground.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of electrical components.

Chicago and New York City require that all power be hardwired in the field. Modular power systems are not permitted. All Privacy Wall panels can be hardwired on site using conventional electrical components.

New York City/Chicago power prep option can be selected to provide panel cutouts and internal hardware to receive hardwired components.

New York City/Chicago power prep option requires use of Privacy Wall cover plate, ordered separately.

Glass Wall Panels

Including Glass Selections Wall Panels

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Privacy Wall glass wall panels and Glass Selections wall panels

create floor-to-ceiling walls, prefabricated to the height and width dimensions you specify. These panels, which offer power and communication capability in the base, can be relocated to respond to changing needs.

► Specifying, pages 94

Feature strip joins panels to other panels, posts, adapters, and other adjacent components. Feature strips are available in paint, anodized aluminum, and fabric.

Factory-installed lites

can be specified as the same or different glass finishes along with a variety of glass types.

Tip: For information regarding Etched and Pattern Glass Planning.

► Page 78.

Muntins divide glass into separate lites and are available in two heights, 2 1/4" and 1 1/2".

Adjustable levelers

allow panels to be installed on uneven floors.

Continuous base trim

is available in two heights (2 1/2"H and 5"H) and must be ordered separately. It is installed in the field.

Recessed or overlapping ceiling track is available.

Post extensions are available in two versions to accommodate both types of ceiling tracks.

Glass is available in select standard finishes. Customer's Own Glass is also available through Specials.

► Page 95.

Floor track is unitized to the panel to receive base trim and provide visual and acoustic separation at the floor.

Tip: When installing on low-profile floor, specify universal floor grippers.

► Page 204.

Power and communication outlets can be located in the base of full-glass panel or divided lite panel. Receptacles and cover plates are ordered separately.

Tip: Power and communication is not available in 2 1/2"H base trim.

Product Details

Glass wall panel, includes Glass Selections

Two divided lites, includes Glass Selections

Three divided lites

Four divided lites

Five divided lites

Glass wall panels are available in the following types: one lite, two lites, three lites, four lites, and five lites. Transom-aligned top lites can be specified.

Tip: Glass Selections glass wall panels are available only in one lite and two lite (transom-aligned) versions.

89"H to 120"H

Panel height can be specified from 89"H to 120"H, in one-inch increments, to accommodate different ceiling heights.
Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Some pattern glass types have a linear pattern. These linear patterns are oriented vertically as shown.
► See page 78 to identify vertical pattern glass.

Ceiling track allows 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions.

Floor track allows 3/4" of vertical adjustment with the 5"H base while the 2 1/2"H base allows 1/2" of vertical adjustment to accommodate variations at base.

Standard glass panel widths range from 6"W to 60"W in 1/16" increments.

Modular glass panel widths range from 6 11/16"W to 58 11/16"W in 1" increments.

Tip: Modular wall panels are 1 5/16" less in width than standard wall panels.

Muntins are factory installed horizontal framing elements that physically divide glass lites. Muntins match frame color specified. Muntins and glass horizontals can be no closer than 6 7/8". Privacy Wall is available in paint only. Glass Selections is available in paint or clear anodized aluminum.

Tip: If 1 1/2"H top muntin size is selected, then the lower muntin size(s) must be the same 1 1/2"H muntin size. If 2 1/4" top muntin size is selected, then either 2 1/4"H or 1 1/2"H muntin size can be specified for the entire lower muntin location(s).

Glass wall panels with transom-aligned top lite correspond to transom-height doors.

Tip: If 1 1/2"H top muntin size is selected, then the lower muntin size(s) must be the same 1 1/2"H muntin size. If 2 1/4" top muntin size is selected, then either 2 1/4"H or 1 1/2"H muntin size can be specified for the entire lower muntin location(s).

Width of panel is measured to center of joint between two panels.

Modular panels used with adapters allow centerline planning. In the example above, two modular panels allow the distance between the centerline of the two parallel walls to remain at 12'0".

Glass Wall Panels, Including Glass Selections Wall Panels, continued

Modular panel widths are slightly smaller ($1\frac{5}{16}$ " less) than regular panel widths so that when a corner condition is created, the overall dimension remains unchanged.

Continuous base trim, ordered separately, is 5"H or 2 $\frac{1}{2}$ "H and available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

Base trim fits into position at the bottom of panel surface above the floor track.

Finished-end adapter is available to finish the exposed end of a run of panels. Adapter adds approximately $1\frac{3}{16}$ " to the length of the wall.

Connections

Feature strips, ordered separately, join panels together. Strip prevents light and sound leaks. To rearrange panels, painted and anodized feature strips can be removed and reused. Fabric covered feature strips cannot be reused, and will need to be replaced as part of rearrangement process. ▶ Page 72

Half feature strips are used in combination with inline feature strips for inside corner applications.

Ceiling track, ordered separately, joins the top of wall panels to the ceiling. Ceiling track is available recessed or overlapping. ▶ Page 56

Panel-supported storage and work surface components cannot be attached to glass wall panels. Use solid wall or Clerestory panels instead. ▶ See page 73 for more information about hanging components.

2-way, 3-way, and 4-way posts join panels in in-line, L-, T-, X-, V-, and Y-configurations without blocking access to integral slotted verticals. ▶ Page 70

Adapters connect panels in L-, T-, and X-configurations without adding extra creep to panel dimension. *Tip: Adapter blocks slotted verticals in panel edge of some panels.* ▶ Page 68

Mini end connects a panel or panel run to a perpendicular building wall. Elements of the mini end telescope allow a limited range of dimensional adjustability. Mini-ends come in small, medium, or large. ▶ Page 62

If required, I-Line interface post can be found in Service Parts (**1571843SR**).

Universal floor grippers are designed for use with Privacy Wall panels that are placed on top of Low-Profile Floor. The universal floor gripper fits underneath the panel floor channel and glides to evenly distribute weight on the floor. When used with double-sided adhesive tape, the universal floor gripper will also prevent movement on hard surface floors like tile, wood, or terrazzo.

Tip: Universal floor grippers must be specified when installing in accordance with ICC Compliance Report.

Panels which are configured for 2 1/2" H base trim are not compatible with the universal floor gripper. Panels that are required to be secured to the floor must be directly anchored to the floor with conventional fasteners.

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Ceiling Top Mount Slider in Sidelite Application

No Slider

Privacy Wall glass wall is offered in two different frame types, no slider and ceiling top mount slider. Both frame types are offered as one lite, two lites, three lites, four lites, and five lites.

Full-Height Slider in Sidelite Application

Transom-Aligned Slider in Sidelite Application

Full-Height

Transom-Aligned

Glass Selections glass wall is offered in four different frame types, full-height, full-height slider, transom-aligned, and transom-aligned slider.

Tip: Glass Selections muntins are 2 1/2"H.

Wiring & Cabling

Glass Privacy Wall panels can be specified with factory-installed powerkits. Power kits include a power block. Field-installed powerkits are also available.

Power receptacles

Cover plates, ordered separately, accommodate power receptacles and communication faceplates.

Base-height power block will be factory installed in center of panel. A single power block can accommodate receptacles in one side or both sides
Tip: Base height power is only available with 5"H base.

Chicago power and communication receptacles

Base trim, ordered separately, is 64"W and available in five versions— power only, power and communication, communication only, Chicago power, and Chicago power and communication.

Width of panel must be adequate to accommodate cutouts.

- 30"W–60"W for standard panel
- 28.657"W–60"W for modular panel

Glass Wall Panels, Including Glass Selections Wall Panels, continued

Power and Communication

Power receptacles are ordered separately and installed on site. They are coded to indicate which circuit and type of ground they engage.
▶ Page 80

Controlled receptacle must be indicated when tying into the building management system. Duplex receptacles have an option for a factory permanent, pad stamp power icon symbol with the word controlled per compliance with the Energy Code.

USB receptacles are ordered separately and installed on site. They are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampere of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

Communication receptacles are provided by others and installed on site.

Receptacles can be specified in base height only on glass panels.

Infeeds can connect power blocks to building power in the ceiling or floor. Because glass panels cannot accommodate vertical routing of harnesses through the glass portion of the panel, use adjacent solid panels, mini ends, or door frames to bring power from the ceiling to a power block in a glass panel.

Modular harnesses and harness-to-harness connectors can be used to extend power to a power block from another power block in an adjacent panel.

Wiring schematics are available to accommodate a wide range of building types and power needs. 15-amp and 20-amp systems are available in 4-circuit, 3+1; 4-circuit, 2+2; and 3-circuit with separate neutrals. All of these choices are supported with a system ground and isolated ground.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of electrical components.

Chicago and New York City require that all power be hardwired in the field. Modular power systems are not permitted. All Privacy Wall panels can be hardwired on site using conventional electrical components.

Glass Selections Glass and Frame Kits Wall Panels

Including Glass Selections L- and T-Corner Units

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Glass Selections glass and frame kits, including Glass Selections L- and T-corner units, create floor-to-ceiling walls, prefabricated to the height and width dimensions you specify. These panels, which offer power and communication capability in the base, can be relocated to respond to changing needs.
► Specifying, pages 150

Feature strip joins panels to other panels, posts, adapters, and other adjacent components. Feature strips are available in paint, anodized aluminum, and fabric.

Glass Selections L-corner are factory assembled. Glass joint is field-glazed (glazing tape or silicone sealant) as part of the installation process.

Transom lites can be specified as the same or different glass finishes along with a variety of glass types.
Tip: For information regarding Etched and Pattern Glass Planning.
► Page 78.

Adjustable levelers allow panels to be installed on uneven floors.

Continuous base trim is available in two heights (2 1/2"H and 5"H) and must be ordered separately. It is installed in the field.

Recessed or overlapping ceiling track is available.

Post extensions are available in two versions to accommodate both types of ceiling tracks. Post extensions are not available on L- and T-corner units.

Glass Selections frame and glass kits utilizes butt glazing for an open, seamless effect. Frame and glass kits are assembled in the field. Glass has a minimum of two lites.

Glass Selections T corner frame and glass kits are assembled in the field. Butt joints must be glazed with glazing tape or silicone sealant to be code compliant.

Glass is available in select standard finishes. Customer's Own Glass is also available through Specials.

Floor track is unitized to the panel to receive base trim and provide visual and acoustic separation at the floor.
Tip: When installing on low-profile floor, specify universal floor grippers.
► Page 227.

Power and communication outlets can be located in the base of the panel. Receptacles and cover plates are ordered separately.
Tip: Power and communication is not available in 2 1/2"H base trim.

Product Details

Full-height glass and
frame kit wall panel

Transom-aligned glass
and frame kit wall panel

Glass Selections glass and frame kits are available in the following types: full-height and transom-aligned.

89"H
to
120"H

Panel height can be specified from 89"H to 120"H, in one-inch increments, to accommodate different ceiling heights.
Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Some pattern glass types have a linear pattern. These linear patterns are oriented vertically as shown.
► See page 78 to identify vertical pattern glass.

Glass Selections frame and glass kits are assembled in the field. Butt joints must be sealed glazed with glazing tape or silicone sealant to be codecompliant.
Tip: COM glass for frame and glass kits must be $\frac{3}{8}$ " thick for structural integrity.

Tip: Standard glass thickness must be between 0.312" and 0.417" thick.

Ceiling track allows $\frac{1}{2}$ " of vertical adjustment at ceiling to accommodate variations in field conditions.

Floor track allows $\frac{3}{4}$ " of vertical adjustment with the 5"H base while the 2 $\frac{1}{2}$ "H base allows $\frac{1}{2}$ " of vertical adjustment to accommodate variations at base.

Standard frame and glass kits can range in widths from 60 $\frac{1}{16}$ "W to 144"W in $\frac{1}{16}$ " increments.

Modular frame and glass kits can range in widths from 59 $\frac{11}{16}$ "W to 142 $\frac{11}{16}$ "W in 1" increments.

Width of panel is measured to center of joint between two panels.

Glass wall panels with transom-aligned top lite correspond to transom-height doors.
Tip: Glass Selections muntins are 2 $\frac{1}{2}$ "H.

Modular panels used with adapters allow centerline planning. In the example above, two modular panels allow the distance between the centerline of the two parallel walls to remain at 24'0".

Glass Selections Glass and Frame Kits Wall Panels Including Glass Selections L- and T-Corner Units, continued

Modular panel widths are slightly smaller ($\frac{15}{16}$ " less) than regular panel widths so that when a corner condition is created, the overall dimension remains unchanged.

Continuous base trim, ordered separately, is 5"H or 2 1/2"H and available in 10' lengths. It runs along multiple panels to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

Base trim fits into position at the bottom of panel surface above the floor track.

Finished-end adapter is available to finish the exposed end of a run of panels. Adapter adds approximately $\frac{13}{16}$ " to the length of the wall.

Glass Selections L-corner units, ordered separately, join Glass Selection panels in L-configuration. Butt joints are field-glazed (glazing tape or silicone sealant) on site during installation. ▶ Page 180

Glass Selections L-corner units plan dimensionally in the same manner as individual panels that are joined by a post.

Full-size panel for interior dimension planning

Modular-size panel for centerline planning

Glass Selections T-corner frame kits join Glass Selection panels in a T-configuration. Frame kits are assembled in the field. Glass kits include three pieces of glass. Butt joints must be glazed with glazing tape or silicone sealant to be code-compliant.

Due to the process steps involved in installation of glass, T-corner frame kits can be placed no closer than 20" to a single mini end or wall channel.

Connections

Feature strips, ordered separately, join panels together. Strip prevents light and sound leaks. To rearrange panels, painted and anodized feature strips can be removed and reused. Fabric covered feature strips cannot be reused, and will need to be replaced as part of rearrangement process. ▶ Page 72

Half feature strips are used in combination with inline feature strips for inside corner applications.

Recessed

Overlapping

Ceiling track, ordered separately, joins the top of wall panels to the ceiling. Ceiling track is available recessed or overlapping.
► Page 56

Panel-supported storage and work surface components cannot be attached to glass wall panels. Use solid wall or Clerestory panels instead.
► See page 73 for more information about hanging components.

2-way, 3-way, and 4-way posts join panels in in-line, L-, T-, X-, V-, and Y-configurations without blocking access to integral slotted verticals.

Adapters connect panels in L-, T-, and X-configurations without adding extra creep to panel dimension.
► Page 68

Mini end connects a panel or panel run to a perpendicular building wall. Elements of the mini end telescope allow a limited range of dimensional adjustability. Mini-ends come in small, medium, or large.
► Page 62

If required, I-Line interface post can be found in Service Parts (**1571843SR**).

Universal floor grippers are designed for use with Privacy Wall panels that are placed on top of Low-Profile Floor. The universal floor gripper fits underneath the panel floor channel and glides to evenly distribute weight on the floor. When used with double-sided adhesive tape, the universal floor gripper will also prevent movement on hard surface floors like tile, wood, or terrazzo.

Panels which are configured for 2 1/2"H base trim are not compatible with the universal floor gripper. Panels that are required to be secured to the floor must be directly anchored to the floor with conventional fasteners.

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Full-Height Slider

Transom-Aligned Slider

Full-Height

Transom-Aligned

Glass Selections Glass and Frame Kit is offered in four different frame types, Full-Height, Full-Height Slider, Transom-Aligned and Transom-Aligned Slider.

Wiring & Cabling

Glass Selections glass frame kit's power is located 12" from the panel edge.

Power receptacles

Cover plates, ordered separately, accommodate power receptacles and communication faceplates.

Base-height power block will be factory installed 12" from the panel edge on each end panel. A single power block can accommodate receptacles in one side or both sides.
Tip: Base height power is only available with 5"H base.

Glass Selections Glass and Frame Kits Wall Panels Including Glass Selections L- and T-Corner Units, continued

Base trim, ordered separately, is 64"W and available in five versions— power only, power and communication, communication only, Chicago power, and Chicago power and communication.

Width of panel must be adequate to accommodate cutouts. See table below for minimum widths.

- 60¹/₁₆"W – 144"W for standard panel
- 60¹/₁₆"W – 142¹¹/₁₆"W for modular panel

Power and Communication

Power receptacles are ordered separately and installed on site. They are coded to indicate which circuit and type of ground they engage.

► Page 80

Controlled receptacle must be indicated when tying into the building management system. Duplex receptacles have an option for a factory permanent, pad stamp power icon symbol with the word controlled per compliance with the Energy Code.

USB receptacles are ordered separately and installed on site. They are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampereage of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

Communication receptacles are provided by others and installed on site.

Receptacles can be specified in base height only on glass frame kits.

Infeeds can connect power blocks to building power in the ceiling or floor. Because glass panels cannot accommodate vertical routing of harnesses through the glass portion of the panel, use adjacent solid panels, mini ends, or door frames to bring power from the ceiling to a power block in a glass panel.

Modular harnesses and harness-to-harness connectors can be used to extend power to a power block from another power block in an adjacent panel.

Wiring schematics are available to accommodate a wide range of building types and power needs. 15-amp and 20-amp systems are available in 4-circuit, 3+1; 4-circuit, 2+2; and 3-circuit with separate neutrals. All of these choices are supported with a system ground and isolated ground.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of electrical components.

Chicago and New York City require that all power be hardwired in the field. Modular power systems are not permitted. All Privacy Wall panels can be hardwired, on site using conventional electrical components.

Butt-Hinged Frames and Door Leaves

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Privacy Wall doors can be used with Privacy Wall panels. Door frames and leaves must be ordered separately.

► Specifying, page 110

Recessed or overlapping ceiling track is available.

Pair leaves can be painted or specified with wood veneer.

Inactive door leaf is secured with flush bolts that are included with hinge kit for pair doors (ordered separately).

Door frame is factory prepped for butt hinges. Door hardware is ordered separately.

Tip: Butt-hinged door frames are not available for Glass Selections panels.

Active door leaf accommodates latch.

Post extensions are available in two versions to accommodate both types of ceiling track.

Feature strip joins door frames to panels, posts, or adapters.

Single door leaves are solid or glass. Solid leaves can be painted or specified with wood veneer.

Product Details

Single and pair versions of doors and door frames are available.

Glass doors can be ordered with a bottom rail height dimension of 5"H or 12"H. The 5" rail height will align closely with the bottom horizontal of a glass panel. In some areas or applications, a 12" high bottom rail may be required by code. Check with local code officials to ensure compliance.

Door frames can be specified from 89"H to 120"H, in one-inch increments, to accommodate different ceiling heights.
Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Ceiling track allows 1/2" of vertical adjustment to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment.

Plinths are included to finish the bottom of both sides of a door frame.

Full-height doors increase in height as the door frame increases.
Tip: Maximum ceiling height of glass doors is 9'0"H.

Transom-height door leaves are 7'0"H. Transom increases in height as the door frame increases.

Width of single solid door frame is 40"W or 42"W and accommodates door leaf widths of 35 13/16" or 37 13/16". The 90° clear opening dimensions are as follows:

Butt-Hinged Solid Door

- 40" door: 33 1/16"
- 42" door: 35 1/16"

Butt-Hinged Framed Glass Door

- 40" door: 33 1/16"
- 42" door: 35 1/16"

Width of single glass-door frame is 40"W and accommodates a 35 13/16"W door.

Width of pair frame is 76"W and accommodates two 35 13/16"W door leaves.

Transom-height doors correspond to Clerestory or glass wall panels with transom-aligned top lite.
Tip: For information regarding Etched and Pattern Glass Planning.
▶ Page 78.

Transom-height frames for pair of doors with vertical directional, patterned glass will have a vertical muntin installed in the center of the transom.
▶ See *Glass Availability Matrix* for directional glass options, page 264.

Left- and right-hand versions of butt-hinged doors and door frames are available. Swing orientation cannot be altered.

To determine whether a door is left or right hand, imagine yourself standing in the door's frame with your back against the side of the frame where the door's hinges will be attached. If the door will swing to your left, it is a left-hand door (and frame). If it will swing to your right, it is a right-hand door (and frame).

Butt-Hinged Frames and Door Leaves, continued

Ceiling track bypass cover is available to conceal switch conduit routed next to a recessed ceiling track as the conduit travels from the ceiling into a door frame.

► Page 57

Cutout for cylindrical passage set or lockset

is standard in butt-hinged door leaves. Cutout for mortise passage set or lockset is available as an option. Order passage sets and locksets separately.

Tip: Cutout and hardware must be the same for door and door frames.

Tip: Locksets and passage sets ordered from another manufacturer must have a 13/8" curved strike plate.

Tip: Doors that are specified with hardware prep for mortise locks will not have faces drilled for levers, cylinders, etc. All necessary holes in the face of the door must be drilled by the installer.

Cylindrical lock keying options:

- Random key with small format interchangeable core.
- No core (to allow customer to provide cores to specific keying requirements).

For customers who require specific keying configurations and/or master key coordination, it is recommended to order locks without cylinder cores. This will allow the customer to manage their keying requirements locally by securing cylinders or cores through their preferred security hardware provider.

The cylindrical lock set for swing doors

1. With a random keyed, small format interchangeable core (SFIC).
2. Without a core, configured for a (SFIC)

Cylindrical lock sets are compatible with six or seven pin cores (SFIC) as manufactured for Sargent, Best, or Schlage.

Mortise latchsets are available with three different lever styles.

Mortise latchsets can be specified without lever handles to allow for users to provide locally sourced handles.

The mortise lockset for swing doors

1. With a random keyed lock cylinder configured for a small format interchangeable core (SFIC).
2. Without a core.

Mortise lock keying options:

- Random keyed with interchangeable core (SFIC).
- No cylinder (to allow customer to provide cylinders to specific keying requirements).

Magnetic wall stop

Dome-style floor stop

Screw-in base stop

Door stops can be ordered for use with doors. Magnetic wall stop, dome-style floor stop, and screw-in base stop are available. Magnetic wall stop is for use with painted solid or Clerestory panels only.
Tip: Dome stops and base stops are not recommended when using polished glass doors with drop seals.

All door openings meet ADA requirements.

Connections

Feature strips, ordered separately, join door frames to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused.

► Page 72

Ceiling track, ordered separately, joins the top of door frames to the ceiling. Ceiling track is available recessed or overlapping.

► Page 56

Panel-supported storage and worksurface components cannot be attached to door frames. Use solid wall or Clerestory panels instead.

2-way, 3-way, and 4-way posts join a door frame to a panel in an L-, T-, X-, V-, or Y-configuration. A T-, X-, or inline post can also be used between two in-line door frames.

► Page 70

Adapters connect a door frame to a panel in an L-, T-, or X-configuration. A T-adaptor can also be used between two in-line door frames.

► Page 68

Mini end connects a door frame to a perpendicular building wall.

► Page 62

When positioned next to a door frame, the mini end should be specified "to floor," and will be field-cut by the installer to final length.

Do not use a wall channel to connect a door frame to a perpendicular wall.

► See *Wall Channel Flexibility*, page 66.

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Wiring & Cabling

Installation of a switch in a door frame will limit the ability to route a power infeed through the frame. If the door frame has no switch, you can route power to the base of an adjacent glass panel.

Switch cutout, available as an option on single door frames, will be factory-cut in the strike jamb of the frame, on the side that matches the direction in which the door swings. Switch cutout is located 42" from floor.

Wiring is routed from the ceiling or floor through the door jamb.

Low-voltage switches are available on all door frame types except pairs of doors.

Low-voltage switches can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

Low-voltage switch kits include:

- Switch device
- Cover trim
- Transformer
- Low-voltage (18-gauge) wire x 30'

High-voltage switches are rated for 120V and 277V applications, and are available on all door frame types except Privacy Wall slider doors, Glass Selections slider doors, and pairs of doors. You must specify door frame for use with switch cutout.

High-voltage switch kits include:

- Electrical box and strap
 - Switch device
 - Cover plate
- Wiring and conduit are not included.

Feature strip

- Paint
- Fabric

Tip: Finishes for door hardware can vary slightly from one component to another depending on base metal materiality and finishing processes. When hardware is specified for common assemblies, all hardware components may not match exactly, but are designed to be compatible within a common door opening.

Application Topics

Door Swing Orientation Choices

► Page 46

Feature Strip Application

► Page 72

Glass Selections Butt-Hinged Frames and Door Leaves

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Glass Selections doors and frames can be used with Privacy Wall and Glass Selections panels. Door frames and leaves must be ordered separately.
 ▶ Specifying, page 162

Glass selections butt-hinged doors are available with polished edge door leaves with 1/2" thick tempered glass.

89"H to 120"H

40"W Glass Selections butt hinge frames can be specified from 89"H to 120"H in 1" increments. Doors and frames that are 42"W can be specified at a maximum height of 9'0"H.

Polished edge butt-hinged doors are available as single doors in full height configuration only.

Butt Hinge

Slim Line Hinge

Polished edge butt-hinged doors can be equipped with polished edge butt hinges or slim line hinges.

When specified with the self-close feature, one of the slim line hinges includes a hold-open feature that engages the door at approximately 75° (when 90° hinge is specified) or 165° (when 180° hinge is specified). The hinge includes an adjustable control for regulating the force of the closure and fine-tuning the braking control.

The slim line hinge can also be configured as a free-swinging hinge.

When specified with polished edge slim line hinges, doors and frames will be configured for two hinges.

When specified with polished edge butt hinges, doors and frames will be configured for four hinges.

Glass Selections butt-hinged doors can be specified with mortise and cylindrical latch sets, push/pull handles, and ladder pulls.

► Refer to *V.I.A. Specification Guide* for ladder pulls and push/pull handles.

When equipped with push/pull handles or ladder pulls, self-closing hinges or a roller latch should be specified to keep the door in the closed position.

Lock housing

Glass Selections polished edge butt-hinged door leaves include housing for latch sets and roller latches as specified.

Glass Selections butt-hinged door frames can be specified with plinths for 2 1/2"H and 5"H base.

Ceiling track allows 1/2" of vertical adjustment to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment.

Floor track allows 3/4" of vertical adjustment with the 5"H base while the 2 1/2"H base allows 1/2" of vertical adjustment to accommodate variations at base.

Glass Selections Butt-Hinged Frames and Door Leaves, continued

To enhance acoustical performance, an optional drop seal can be specified at the bottom of the door. The drop seal automatically deploys to block the gap under the door when the door is closed and retracts when the door is open.

In order to ensure proper engagement at the drop seal, the door frame cannot accommodate any fluctuation in floor height.

Width of a single door frame is 40"W or 42"W and accommodates door leaf widths of 35¹³/₁₆" or 37¹³/₁₆". The 90° clear opening dimensions are as follows:

Butt-Hinged Polished Edge Door

- 40" door: 32⁵/₈"
- 42" door: 34⁵/₈"

Slim Line Polished Edge Door

- 40" door: 33⁵/₃₂"
- 42" door: 35⁵/₃₂"

Left- and right-hand versions of butt-hinged doors and door frames are available. Swing orientation cannot be altered.

To determine whether a door is left or right hand, imagine yourself standing in the door's frame with your back against the side of the frame where the door's hinges will be attached. If the door will swing to your left, it is a left-hand door (and frame). If it will swing to your right, it is a right-hand door (and frame).

When specifying a door leaf with a satin finish, the etched side of the glass can be oriented to either surface of the wall. For this purpose, the outside surface is defined as shown above.

40"W Privacy Wall butt-hinged solid and glass doors can be used with Glass Selections butt-hinged door frames by specifying the same ceiling height. Door frames must be configured for polished edge butt hinges (not slim line).

When using Privacy Wall butt-hinged doors with Glass Selections butt-hinged door frames, Privacy Wall butt hinges must be specified.

► See GPDBH4, page 132.

Pivot-Hinged Frames and Door Leaves

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Privacy Wall doors can be used with Privacy Wall panels. Door frames and leaves must be ordered separately.

► Specifying, page 112

Tip: Glass Selections panels are compatible with pivot-hinged frames and leaves only.

Recessed or overlapping ceiling track is available.

Pair leaves can be painted or specified with wood veneer.

Frame has a narrow (1¼"W) profile. Expanded frame to accommodate switch has a 2½"W profile.

Inactive door leaf

Door frame is factory prepped for pivot hinges. Door hardware is ordered separately.

► Page 130

Tip: Hardware is mostly hidden.

Post extensions are available in two versions to accommodate both types of ceiling track.

Feature strip joins door frames to panels, posts, or adapters.

Active door leaf accommodates latch.

Single door leaves are solid or glass. Solid leaves can be painted or specified with wood veneer.

Product Details

Single and pair versions of doors and door frames are available.

Glass doors can be ordered with a bottom rail height dimension of 5"H or 12"H. The 5" rail height will align closely with the bottom horizontal of a glass panel. In some areas or applications, a 12" high bottom rail may be required by code. Check with local code officials to ensure compliance.

Door frames can be specified from 96"H to 120"H, in one-inch increments, to accommodate different ceiling heights.

Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Ceiling track allows 1/2" of vertical adjustment to accommodate variations in field conditions. Floor track allows 3/4" of vertical adjustment.

Plinths are included to finish the bottom of both sides of a door frame.

Full-height doors increase in height as the door frame increases. *Tip: Maximum ceiling height of glass doors is 108"H.*

Transom-height door leaves are 84"H. Transom increases in height as the door frame increases.

Tip: For information regarding Etched and Pattern Glass Planning.

► Page 78.

Width of single door frame without switch cutout is 40"W and accommodates a 37 3/16"W door.

Width of pair frame is 80"W.

Width of single door frame with switch cutout is 42"W and accommodates a 36 3/8"W door.

Maximum swing of door is 115°.

Transom-height frames for pair of doors with vertical directional, patterned glass will have a vertical muntin installed in the center of the transom.

► See *Glass Availability Matrix* for directional glass options, page 264.

Transom-height doors correspond to Clerestory or glass wall panels with transom-aligned top lite.

Tip: For information regarding Etched and Pattern Glass Planning.

► Page 78.

Left-hand pivot door

Right-hand pivot door

Solid pivot-hinged doors and door frames are non-handed. By removing and reinstalling the strike plate, you can convert a left-hand pivot door into a right-hand pivot door.

Tip: Glass pivot doors are handed to ensure that glass is properly oriented.

► Page 42

Pivot-Hinged Frames and Door Leaves, continued

Left-hand swing

Right-hand swing

Pivot-hinged door frames with switch cutout are handed. The switch cutout is on the side of the frame opposite the pivots. You cannot change the swing orientation of the door frame in the field, although you can change the swing of the door.

To determine whether a door is left or right hand, imagine yourself standing in the door's frame with your back against the side of the frame where the door's hinges will be attached. If the door will swing to your left, it is a left-hand door (and frame). If it will swing to your right, it is a right-hand door (and frame).

Ceiling track bypass cover is available to conceal switch conduit routed next to a recessed ceiling track as the conduit travels from the ceiling into a door frame.

► Page 193

Cylindrical passage set or lockset

Mortise passage set or lockset

Cutout for cylindrical passage set or lockset is standard in pivot-hinged door leaves. Cutout and strike plate for mortise passage set or lockset is available as an option. Order passage sets and locksets separately.

Tip: Cutout and hardware must be the same for door and door frames.

Tip: Mortise locksets and passage sets ordered from another manufacturer must have a 1½" flat strike plate.

Tip: Doors that are specified with hardware prep for mortise locks will not have faces drilled for levers, cylinders, etc. All necessary holes in the face of the door must be drilled by the installer.

Magnetic wall stop

Dome-style floor stop

Screw-in base stop

Door stops can be ordered for use with doors. Magnetic wall stop, dome-style floor stop, and screw-in base stop are available. Magnetic wall stop is for use with painted solid or Clerestory panels only.

Tip: Dome stops and base stops are not recommended when using polished glass doors with drop seals.

All door openings meet ADA requirements.

Connections

Feature strips, ordered separately, join door frames to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused.

► Page 72

Recessed

Overlapping

Ceiling track, ordered separately, joins the top of door frames to the ceiling. Ceiling track is available recessed or overlapping.

► Page 56

Panel-supported storage and worksurface components cannot be attached to door frames. Use solid wall or Clerestory panels instead.

2-way, 3-way, and 4-way posts join a door frame to a panel in an L-, T-, X-, V-, or Y-configuration. A T-, X-, or in-line post can also be used between two in-line door frames.

► Page 70

Adapters connect a door frame to a panel in an L-, T- or X-configuration. A T-adapter can also be used between two in-line door frames.

► Page 68

Mini end connects a door frame to a perpendicular building wall.

► Page 62

When positioned next to a door frame, the mini end should be specified "to floor" and will be field-cut by the installer to final length.

Do not use a wall channel to connect a door frame to a perpendicular wall.

► See *Wall Channel Flexibility*, page 66.

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Wiring & Cabling

Pivot door
with switch

Pivot door
without switch

Installation of a switch in a door frame will limit the ability to route a power infeed through the frame. If the door frame has no switch, you can route power to the base of an adjacent glass panel.

In door frame with glass transom, switch wiring must run down through the floor. Wiring cannot be run up to the ceiling.

Left-hand
door

Right-hand
door

Switch cutout in pivot-hinged door frames is always on the strike jamb of the frame. Cutout is standard on the side that matches the direction in which the door swings. Switch cutout is located 42" from floor.

Low-voltage switches are available on all door frame types except pairs of doors.

Low-voltage switches can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

Pivot-hinged door frames can remain non-handed by installing low-voltage switches in the feature strip rather than positioning them in the door frame.

High-voltage switches are available on all door frame types except Privacy Wall slider doors, Glass Selections slider doors, and pairs of doors. You must specify door frame for use with switch cutout.

► Page 42

Tip: Transom-height door frames are also available.

Privacy Wall Slider Doors

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Privacy Wall slider doors include door frame, door track, slider door, glass wall sidelite panel, and hardware (pull and lock).
 ▶ Specifying, page 137

Post extensions are available in two versions to accommodate both types of ceiling track.

Recessed or overlapping ceiling track is available.

Fascia, part of the door track, conceals track and ceiling mechanism and projects beyond the face of the wall.

Knockout for low-voltage switch is located on the glass wall sidelite panel 42" from floor.

Glass Wall sidelite panel does not move. It provides space for the overlapping door when it is in the open position.

Slider door is available with up to four muntins to match the glass wall sidelite. The door can be specified with or without a lock.

Feature strip joins slider door to panels, posts, or adapters.

Sliding door frame is handed and works with slider doors, door track, and glass wall sidelite.

Strike post marks the extreme limit of door's travel.

Door pull is available in brushed stainless or low gloss black.

Slider door slides in front of fixed panel.

Continuous base trim is 5"H and ordered separately.

Floor track connects base of fixed panel to floor, with-out fasteners.

Product Details

Slider Door Frame

Slider Door

Glass Wall Sidelite

Slider door frames, doors, and glass wall sidelites can be specified from 89"H to 120"H, in one-inch increments, to accommodate different ceiling heights.

Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Slider door track can be specified from 75 1/2"W to 113"W, in 1/16" increments to accommodate different assembled slider door widths.

Slider door and glass wall sidelite assembled units are available with five different glass configurations—one lite, two lites, three lites, four lites, and five lites.

Hardware, ordered separately, is available as a curved tubular pull and lock.

Ceiling track allows 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions.

Floor track allows 3/4" of vertical adjustment to accommodate variations at base.

Width of fully assembled slider door has an available range from 75 1/2"W to 113"W in 1/16" increments. Glass wall sidelite accounts in overall width. Door and frame available width range is 40 1/2"W to 60 1/4"W.

Variable widths – door and side panel: variable slider door assembly widths can be achieved by varying the size of both the side panel and the door, keeping both symmetrical in width.

Variable widths – side panel only: variable slider door assembly widths can be achieved by varying the width of the side panel while the door and frame remain unchanged.

Slider door is available left hand and right hand when viewed from slider door side.

Glass lite types can be specified individually per row. ▶ See *Surface Materials*, page 256. *Tip:* For information regarding Etched and Pattern Glass Planning. ▶ Page 78.

Some pattern glass types have a linear pattern. These linear patterns are oriented vertically as shown. ▶ See page 78 to identify vertical pattern glass.

Muntins are factory-installed horizontal framing elements that physically divide glass lites. Muntins match frame color specified. Muntin sizes can be specified as 1 1/2"H or 2 1/4"H. Muntins can be specified in up to four locations. *Tip:* Muntins and glass horizontals can be no closer than 6 7/8".

Tip: If 1 1/2"H top muntin size is selected, then the lower muntin size(s) must be the same 1 1/2"H muntin size. If 2 1/4" top muntin size is selected, then either 2 1/4"H or 1 1/2"H muntin size can be specified for the entire lower muntin location(s).

Low voltage switch cutout is located in the side face of the finished opening frame.

Tip: If slider door is oriented to the outside of the room, the switch cutout will be positioned on the inside of the room. If slider door is oriented to the inside of the room, the switch cutout will be positioned on the outside of the room.

Low-voltage switches can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

Door lock with interior thumb latch is available as an option. Locks are keyed randomly.

Privacy Wall Slider Doors, continued

If using an alternate pull, sliders can be specified to be provided without a pull and without mounting holes in the door. Care should be taken to use an offset pull, and to avoid interference with the lock mechanism.

Plinths are included to finish the bottom of both sides of a door frame.

Continuous base trim, ordered separately, is 5"H and available in 10' lengths. It runs along multiple panels and slider doors to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other.

Connections

Feature strips, ordered separately, join slider doors to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused.

Ceiling track, ordered separately, joins the top of doors to the ceiling. Ceiling track is available recessed or overlapping.
▶ Page 62

In cases where overlapping ceiling track is specified with slider doors, and ceiling level is severely out of tolerance, the ceiling track may require additional field notching.

Panel-supported storage and worksurface components cannot be attached to slider doors. Use solid wall or Clerestory panels instead.

2-way, 3-way, and 4-way posts join a slider door to a panel in an L-, T-, X-, or in-line configuration. A T-, X-, or in-line post can also be used between two slider doors.
▶ Page 70

Adapters connect a slider door to a panel in an L-, T-, or X-configuration. A T-adapter can also be used with two slider door strikes back to back.
▶ Page 68

Back-to-back slider doors will work at all adapters and posts when slider doors are on the outside of an office.

Plan view of T-post

Plan view of L-post

Slider doors will not work with an L- or T-adapter when slider doors are on the inside of an office. Use a post when positioning slide doors to the inside of an office.
Tip: Slider door handing is oriented to the door side of the unit. Be sure to consider door position when determining handing.

Mini end connects a slider door unit to a perpendicular building wall.
▶ Page 62

When positioned next to a door frame, the mini end should be specified with "no base" and will be field-cut by the installer to final length.

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Slider doors are compliant with ADA guidelines for door openings (32"W), door hardware, and pull force.

For legacy product, the dimensions for the total width, door/frame width, side lite width, and clear opening are as follows:

Overall (A)	80"W	84"W	96"W
Door/Frame (C)	43 ³ / ₄ "W	45 ³ / ₄ "W	51 ³ / ₄ "W
Side Lite (D)	36 ¹ / ₄ "W	38 ¹ / ₄ "W	44 ¹ / ₄ "W
Clear Opening (B)	34 ¹ / ₄ "W	36 ¹ / ₄ "W	42 ¹ / ₄ "W

For enhanced slider style specifications, in specifying the slider width of the door frame/leaf and side lite, the combined width dimensions cannot be outside the minimum and maximum track width dimensions of 75¹/₂" – 113".

The clear opening is approximately 9¹/₂" less than the door frame specification. The side lite width dimension must allow the door to meet the ADA compliance for the door opening clearance dimension of 32".

Maximum dimension example, if a door frame/leaf dimension of 60¹/₄" is specified, the side lite cannot exceed 52³/₄". The two dimensions equate to 113" which is the maximum track width. The side lite width dimension must allow the door to meet the ADA compliance for the door opening clearance dimension of 32", example for a 60¹/₄" door/frame width, the side lite cannot be less than 34" (90¹/₄" total width).

Minimum dimension example, if a door frame/leaf dimension of 41¹/₂" is specified, the side lite cannot be less than 34" (75¹/₂" total width) to meet the ADA compliance for the door opening clearance dimension of 32".

Wiring & Cabling

Slider door does not accommodate vertical wire and cable routing.

Knockout is available on Privacy Wall slider doors for low-voltage switches.

Surface Materials

Door frame and muntins

- Paint

Lite

- Glass

Floor track

- Paint

Base trim

- Paint

Feature strip

- Plastic
- Fabric

Hardware (door pull, lock and hangar)

- 4710 Low Gloss Black
- 8031 Brushed Stainless

Tip: Finishes for door hardware can vary slightly from one component to another depending on base metal materiality and finishing processes. When hardware is specified for common assemblies, all hardware components may not match exactly, but are designed to be compatible within a common door opening.

Application Topics

Feature Strip Application

▶ Page 72

Glass Selections Polished Edge Slider Doors

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Glass Selections slider doors include door frame, door track, slider door, glass wall sidelite panel, and hardware (pull and lock).
 ▶ Specifying, page 168

Recessed ceiling track is recommended for use with Glass Selections slider.

Feature strip joins slider door to panels, posts, or adapters.

Door track runs the length of the door frame and glass wall sidelite.

Knockout for low-voltage switch is located on the glass wall sidelite panel 42" from floor.

Glass Wall sidelite panel does not move. It provides space for the overlapping door when it is in the open position.

Floor track connects base of slider door to floor, without fasteners.

Post extensions are available in two versions to accommodate both types of ceiling track.

Door can be full-height or transom-height.

Strike post limits travel of slider door.

Door pull is available in brushed stainless or low gloss black.

Continuous base trim is 5"H or 2 1/2"H and ordered separately.

Slider door slides in front of fixed panel and is oriented to the outside of the panel.

Product Details

Slider Door Frame

Slider Door

Glass Wall Sidelite

Full-height slider doors frame, door and glass wall sidelite can be specified from 89"H to 120"H, in one-inch increments, to accommodate different ceiling heights.

Transom-height slider door frame and glass wall sidelite can be specified from 89"H to 120"H, in one-inch increments. Transom door height is always 84"H. Transom-height varies depending on ceiling height.

Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Slider door track can be specified from 76"W to 192"W, in 1/16" increments to accommodate different assembled slider door widths.

Ceiling track allows 1/2" of vertical adjustment at ceiling to accommodate variations in field conditions.

Floor track allows 3/4" of vertical adjustment with the 5"H base while the 2 1/2"H base allows 1/2" of vertical adjustment to accommodate variations at base.

Width of fully assembled slider door has an available range from 76"W to 192"W in 1/16" increments. Glass wall sidelite or Glass Selections frame and glass kits account in overall width range. Door and frame available width range is 38"W to 48"W.

The glass selections slider door is standard with a close-assist feature. The close-assist mechanism offers the convenience of controlling the door through its final closing motion and provides an additional safety measure by slowing the door as it contacts the door frame. The glass selections slider door is available as leading and trailing edge.

It is not recommended to use the close-assist mechanism on doors that exceed 32 square feet in size, as the weight of the door may diminish the performance of the close-assist functionality to the point where it may not meet customer expectations. If specifying a full height door that is greater than 9' ceiling height, it is recommended to specify the overall slider assembly width at 80" or less (using a nominal 40" wide door).

Slider door is available left-hand and right-hand. *Tip: Slider door handing is oriented to the door side of the unit. Be sure to consider door position when determining handing.*

Door pull locations for Glass Selections polished edge butt-hinged and slider doors can be changed through the Alternate Pull Manager in SmartTools as part of the design/planning process.

Some pattern glass types have a linear pattern. These linear patterns are oriented vertically as shown. ▶ See page 78 to identify vertical pattern glass.

Muntins are factory-installed horizontal framing elements that physically divide glass lites. Muntins match the frame finish in either anodized aluminum or paint. *Tip: Glass Selections muntins are 2 1/2"H.*

Low-voltage switch cutout is located in the side face of the finished opening frame.

Low-voltage switches can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

Glass Selections Polished Edge Slider Doors, continued

Door hardware must be ordered separately.

Push-pull door pull is available 12"H when lock option is selected and 18"H when no lock option is selected.

Door lock with interior thumb latch is available as an option. Locks are keyed randomly on single slider door only.

Door base is painted to match adjacent base trim. Base trim for the adjacent fixed panel is ordered separately.

Plinths are included to finish the bottom of both sides of a door frame.

Continuous base trim, ordered separately, is 5"H or 2 1/2"H and available in 10' lengths. It runs along multiple panels and slider doors to create a uniform look. For longer runs, multiple base trim segments can be used adjacent to each other. When using 2 1/2"H base, slider door units and other vertical components must be specified with a modified height to accept 2 1/2"H base trim and to ensure that the correct overall ceiling height is achieved.

A vertical seal can be specified and installed between the door frame and side panel to engage the trailing edge of the door when closed.

The vertical seal can be specified with Glass Selections.

Connections

Feature strips, ordered separately, join slider doors to panels, posts, adapters, and other components while preventing light and sound leaks. To rearrange doors, feature strips can be removed and reused.

Ceiling track, ordered separately, joins the top of doors to the ceiling. Ceiling track is available recessed or overlapping.

In cases where overlapping ceiling track is specified with slider doors, and ceiling level is severely out of tolerance, the ceiling track may require additional field notching.

Panel-supported storage and worksurface components cannot be attached to slider doors. Use solid wall or Clerestory panels instead.

2-way, 3-way, and 4-way posts join a slider door to a panel in an L-, T-, X-, or in-line configuration. A T-, X-, or in-line post can also be used between two slider doors.

► Page 70

Adapters connect a slider door to a panel in an L-, T-, or X-configuration. A T-adapter can also be used with two slider door strikes back to back.

► Page 68

Back-to-back slider doors will work with all adapters and posts when slider doors are on the outside of an office.

Slider doors will not work with an L- or T-adapter when slider doors are on the inside of an office. Use a post when positioning slide doors to the inside of an office.

Tip: Slider door handing is oriented to the door side of the unit. Be sure to consider door position when determining handing.

Mini end connects a slider door unit to a perpendicular building wall.
► Page 62

When positioned next to a door frame, the mini end should be specified "to floor," and will be field-cut by the installer to final length.

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Slider doors are compliant with ADA guidelines for door openings (32"), door hardware, and pull force.

For legacy product, the dimensions for the total width, door/frame width, side lite width, and clear opening are as follows:

Overall (A)	80"W	84"W	96"W
Door/Frame (C)	40"W	42"W	48"W
Side Lite (D)	40"W	42"W	48"W
Clear Opening (B)	33 ⁵ / ₁₆ "W	35 ⁵ / ₁₆ "W	41 ⁵ / ₁₆ "W

For enhanced slider style specifications, in specifying the slider width of the door frame/ leaf and side lite, the combined width dimensions cannot be outside the minimum and maximum track width dimensions of 76" – 192".

The door/frame width can be specified in widths from 38" – 48" in 1/16" increments. The side lite can be specified as a glass wall panel or glass and frame kit wall panel.

The clear opening is approximately 6¹¹/₁₆" less than the door frame specification. The clear opening must meet ADA compliance for the door opening clearance dimension of 32".

Example: If a door/frame width of 39" is specified, the side lite must be at least a minimum of 37" and maximum of 153" to comply with the overall width range of the track of 76" – 192" (door/frame opening plus side lite).

Wiring & Cabling

Slider door does not accommodate vertical wire and cable routing.

Low-voltage switches are available for Glass Selections slider doors.

Surface Materials

Door frame and muntins

- Anodized aluminum
- Paint

Lite

- Glass

Door base

- Paint

Base trim

- Paint
- Anodized aluminum (2¹/₂"H base only)

Feature strip

- Plastic
- Fabric
- Anodized aluminum

Hardware (door pull and lock)

- 4710 Low Gloss Black
 - 8031 Brushed Stainless
- Tip: Finishes for door hardware can vary slightly from one component to another depending on base metal materiality and finishing processes. When hardware is specified for common assemblies, all hardware components may not match exactly, but are designed to be compatible within a common door opening.*

Application Topics

Feature Strip Application

► Page 72

Ceiling Tracks

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Ceiling track attaches the top of Privacy Wall panels, door frames, and other components to the ceiling. Ceiling track is available in recessed or overlapping versions.

► Specifying, page 190

Recessed ceiling track is set back from the surface of the panel on both sides.

Recessed ceiling track is recommended for use with Glass Selections to optimize aesthetics and functionality.

Factory-formed corner pieces are available to form L- and V-configurations.

Tip: Use overlapping ceiling track with enhanced core panel to achieve greatest acoustical performance.

Flexible seal ensures tight fit to ceiling to block light and sound leaks.

Overlapping ceiling track covers the top of panel face.

Finished end

Product Details

Straight ceiling track is available in 120" lengths. It can be cut on site to accommodate any condition. Multiple straight lengths can be joined in line.

Finished-end ceiling track is available to finish the exposed end of a straight run of overlapping or recessed ceiling track.

L corner pieces are available recessed or overlapping to form 90° corners.

V corner pieces are available recessed or overlapping to form 120° or 135° corners.

To join panels in a Y-configuration, use straight ceiling track with an L corner piece.

For panels joined in a T-configuration, use two straight lengths of ceiling track, placed perpendicular to each other.

For panels joined in an X-configuration, use multiple straight lengths of ceiling track placed perpendicular to each other.

T-clip can be used for panels joined in a T-configuration to improve track alignment. Use two T-clips for panels joined in an X-configuration.

Connections

Ceiling track can be removed and repositioned using optional hardware, without damaging ceiling grid or tile.

Attachment hardware is available in a variety of types to accommodate most standard ceiling types and other field conditions. To discuss unusual field conditions, call the Steelcase Solutions Resource Team at 1.888.STEELCASE (1.888.783.3522) or send an e-mail to lineone@steelcase.com or contact your regional Architectural Dealer Sales Consultant.

Ceiling track fasteners secure the track to the suspended ceiling grid. Eight standard styles:

- 1"W exposed T
- 9/16"W exposed T
- 1/4" Donn fineline
- 1/8" Donn fineline
- 1"W fluted runner 1/4–20
- 1"W T for tegular ceiling tiles
- 9/16"W T for tegular ceiling tiles
- 1"W tee quick clip for flushceiling tiles

Spacers are included with fasteners for tegular ceiling tiles that allow adjustment for different tile edge depths.

Fasteners for other types of ceilings are purchased locally.

Ceiling clip attachment hardware is ordered separately.

Tip: 1"W tee quick clip is only used when you are installing recessed ceiling track directly inline (flush tiles) on the ceiling grid.

Refer to ceiling clip application

▶ Page 60

Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity. When required by the local seismic design criteria, additional ceiling fasteners and/or structural bracing may be required. For more information regarding seismic applications, visit the Architectural Solutions web site at village.steelcase.com.

Wiring & Cabling

Overlapping ceiling track conceals power harnesses and cables routed vertically from the ceiling into a run of panels.

Bypass cover is available to conceal power harnesses and cables routed next to a recessed ceiling track as the conduit travels from the ceiling into a run of panels or a door frame.

Tip: Bypass cover must be used to conceal a ceiling infeed when the ceiling track is directly under a T-runner and when a modular infeed is being used.

Surface Materials

Ceiling track

- Paint

Cornice Track

Privacy Wall is designed and intended for use with ceiling track that is connected to a suspended ceiling grid. In some cases, it may be desirable to install Privacy Wall in an application where there is no ceiling. In these cases, in order to provide an acceptable level of stability, it is necessary to follow the panel stability guidelines for cornice application. Also, cornice track is inserted into the top of the walls and fastened in place. Ceiling track is not used.

► Specifying, page 194

Glass Selections is not approved for applications with cornice track.

Product Details

Cornice track is available in 120" lengths. It can be cut on site to accommodate any condition. Multiple straight lengths can be joined in line.

When ordering panels and door frames, specify the recessed option for ceiling track.

Glass Selections is not approved for applications with cornice track.

Cornice-supported walls cannot support panel-hung furniture components.

Connections

For panels joined in an L-configuration, use two straight lengths of ceiling track, placed perpendicular to each other using a cornice track L bracket.

For panels joined in a T-configuration, use two straight lengths of ceiling track, placed perpendicular to each other using a cornice track T bracket.

For panels joined in a X-configuration, use three straight lengths of ceiling track, placed perpendicular to each other using a cornice track X bracket.

When installing on hard surface floors, it is recommended to use the universal floor grippers (GPUFG) at each in-line panel joint.

Termination at wall channels or mini ends requires a mechanical fastening to the foreign wall. Either plastic anchors or toggle bolts at drywall, or tapcons at concrete or masonry.

When ordering panels and door frames, specify recessed option for ceiling track.

Glass Selections is not approved for applications with cornice track.

Cornice supported walls cannot support panel hung furniture components.

Permanent wall

Maximum runs for solid panels are 20 feet or 5 panels and both ends must terminate at an intersection or properly anchored termination. An intersecting wall must be at least 48" long.

Permanent wall

Maximum runs for solid panels including a door unit is 16 feet, and both ends must terminate at an intersection or properly anchored termination.

Permanent wall

Permanent wall

Permanent wall

A maximum run for all glass fronts or all glass with a door unit is 12 feet and both ends must terminate at an intersection or properly anchored termination.

If intersecting wall includes two panels or more, another intersecting panel is required at the end.

Pair of doors are not recommended for use in cornice height applications.

Permanent wall

When a single wall exceeds the maximum length as defined above, an intermediate intersecting panel can be inserted to stabilize the wall. If both ends of the wall intersect with either a fixed wall or a connecting wall that is 72" in length, then the intermediate panel can be as small as 24" wide.

When required by the local seismic design criteria, structural bracing may be required. For more information regarding seismic applications, visit the Architectural Solutions web site at village.steelcase.com.

Ceiling Clip Application

Tip: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly install and align the wall components as shown. When any partition is fastened to a suspended ceiling grid, it may be necessary for an architect or engineer to verify that the grid can adequately support the partition. Local codes may require additional bracing.

T Grid Ceiling Fastener Kits

Bolt Slot Grids Ceiling Fastener Kits

Ceiling clips support the most common types of ceiling systems.

Concealed Grids – Field-Purchased Generic Fasteners

For these and other types of ceilings, the following fasteners can be sourced locally by the installer:

Concealed spline	#7 – 17 x 1 5/8" Bugle Head Self-Drilling Screws
Drywall	#14 – 1" Phillips Head SMS with plastic anchor
Plaster	1/4 – 20 Toggle Bolt
Concrete	Tapcon Anchor x 2"
Metal Pan	#7 – 17 x 1" Bugle Head Self-Drilling Screws

Mini Ends

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Mini ends connect a panel to another panel or to a perpendicular building wall or column.

► Specifying, pages 182

Verticals on inner channel allows the mini end to connect to adjacent panel using feature strips. Panel slots remain accessible to support panel-supported furniture. The mini end has no slots and cannot support components.

Neoprene seals provide light and sound seal between the mini end and the building wall.

Outer channel has a flat surface to fit flush against vertical surface of the building wall. No permanent alteration to the building wall is needed.

Inner channel slips inside the outer channel to allow adjustability to fit specific field conditions.

Mini end consists of two telescoping components—inner channel and outer channel.

Feature strip joins the panel to the mini end in the same way that two panels are joined.

Continuous base trim, ordered separately, is added in the field. Mini end extends into the base cavity and is covered by base trim.

Product Details

Height of mini end must be the same as the adjacent panel. Mini ends are available in all the same heights as panels. Indicate height when you order by specifying the ceiling height of the installation.

Three sizes of mini ends are available. Each telescopes to accommodate a different range of dimensions. For installations that require a dimension smaller than 1 1/2", use a wall channel.

► Page 64

For installations that require a dimension larger than 6", consider using a larger panel somewhere in the run or use a panel end cut kit.

► Page 67

Privacy Wall and Glass Selections mini ends

can be specified from 89"H to 120"H, in one inch increments, to accommodate different ceiling heights. Mini ends are 121"H when specified as "no base".

Tip: Specify ceiling height of your installation and component will be fabricated to allow for ceiling track.

Both recessed and overlapping ceiling tracks can be used with mini ends.

Connections

Base of mini end is finished with continuous base trim, ordered separately, like any panel.

When positioned next to a door frame, the mini end should be specified with "no base" (to the floor). No base mini ends come 121"H. Mini ends will be field-cut by installer to final length.

All panel types and door frames can connect to a mini end.

Adjacent panels connect to a mini end in the same way all panels connect. Feature strip on both sides of the panel form a continuous link to the mini end by engaging the verticals of the mini end and the adjacent panel.

Acoustic packing, when used with mini ends, may help to improve acoustical performance.

Physical connection to the building is not needed. Mini end fits tightly against the building wall, and the contact points are sealed with continuous neoprene strips to form a light and sound seal.

Panel-supported components cannot be attached to a mini end. Use the adjacent panel to support storage and worksurface components.

Due to the process steps involved in installation of glass, T-corner frame kits can be placed no closer than 20" to a single mini-end or wall channel.

Wiring & Cabling

Wire and cable routing vertically through a mini end

is possible. Mini ends are often used to route power to a run of glass panels which don't have sufficient space to accommodate vertical power and cable routing.

Surface Materials

Surfaces of mini ends can be paint, fabric, or anodized aluminum for Glass Selections. Both sides must be the same material and color.

Mini end

- Paint
- Fabric
- Anodized aluminum (Glass Selections only)

Wall Channels

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Wall channels connect panels with uncut edges to a perpendicular building wall or column.

► Specifying, page 183

Product Details

Height of wall channel must be the same as the adjacent panel. Wall channels are available in all the same heights as panels. Wall channel ships in 120" lengths and is cut to size in the field.

Three sizes of wall channels are available, small, medium, and large. Each accommodates a range of different dimensions.

► For the dimensions of glass panels and doors, see *Wall Channel Flexibility*, page 66.

Both recessed and overlapping ceiling tracks can be used with wall channels.

Wall channel is cut to the top of the base trim and covered by the base trim.

Solid panels can be inserted to make use of full dimension of the wall channel.

Glass panels should not be inserted too deeply into the wall channel because the wall channel will overlap the glass.

► See *Wall Channel Flexibility*, page 66.

Specify an end filler cut kit when cutting a panel into a wall channel. The end filler cut kit includes a wall channel and spreader.

Connections

All panel types can be used with a wall channel. Adjacent panel is inserted inside the wall channel.

Acoustic packing, when used with wall channels, may help improve acoustical performance.

Physical connection to the building is not needed. Wall channel fits tightly against the building wall, and the contact points are sealed with continuous neoprene strips to form a light and sound seal.

Slotted edges of the adjacent panel are blocked by wall channel. Use mini ends if planning with panel-supported furniture.

► For installations with cut panels, see *Cut Panels*, page 67.

Wiring & Cabling

Wire and cable routing vertically through a wall channel is possible. Wall channels can be used to route power to a run of glass panels which don't have sufficient space to accommodate vertical power and cable routing.

Surface Materials

Surfaces of wall channels are available in paint. Both sides must be the same color.

Wall channel

- Paint

Application Topics

Panel end cut kit connects a cut panel to another panel in line. It restores leveler and housing that is removed when panel is cut on site. Kit includes trim piece to finish the cut side of the panel and to enable feature strip connection to an adjacent panel.

► Page 67

Tip: Hang-on components are not allowed on cut panels.

Wall Channel Flexibility

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Wall channels allow panels to telescope inside. The amount of flexibility varies depending on the size of the wall channel and what type of panel it is or whether it is a door frame.

Tip: Wall channels are not recommended for use with Glass Selections.

Tip: Order an end filler cut kit when positioning a cut panel at a wall channel.

Tip: 1" wall channel is recommended for use with glass panels. The 2 1/4" and 4" wall channels may overlap a portion of the glass area.

Solid Panels

Glass Panels

Door Frames

Door frames must be joined to a perpendicular building wall with a mini end, not a wall channel.

Cut Panels

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Cut panels are typically positioned at the end of a run, adjacent to a wall channel. Cut panels can also be positioned in the middle of a run. All cut panels require an end filler cut kit.

Solid panels can be cut on site to allow walls to fit with existing building conditions. Glass panels cannot be cut.

4" minimum must be cut off

4" minimum must be left on

Plan your cuts so that at least 4" of panel width is removed and at least 4" of panel remains. Angled cuts are possible if they conform to these guidelines.

Tip: When you need multiple cut panels, you may be able to specify a larger panel and cut it to produce two smaller cut panels.

Cut section of panel must have at least one vertical edge intact to be functional.

Panel-end trim piece

Panel end cut kit is available to restore leveler and housing that is removed when panel is cut on site. Kit includes trim piece to finish the cut side of the panel and to enable feature strip connection to an adjacent panel.

Tip: Hang-on components are not allowed on cut panels.

An end filler cut kit is used when a cut panel is positioned adjacent to a fixed wall.

A panel end cut kit is used when a cut panel is positioned in the middle of a run or adjacent to a corner.

Panel end finishes the edge of a cut panel installed in line with other panels to produce a wall of a specific length. A panel end is typically used to achieve a specific length in a wall that has no wall channel. Panel end trim piece is included in the panel end cut kit.

End filler cut kits can be used to finish the edge of a panel that has been cut to conform to the specific shape of a perpendicular building wall, or when a panel is next to an architectural element such as a drywall partition. In this case, you will need to apply an end filler cut kit, which includes a wall channel, spreaders, and a leveler.

Surface materials don't affect cutting. Painted surfaces can all be cut on site.

Plan your cuts with installation in mind to make sure that it will be possible to fit behind any soffits. Aligning cuts with boundaries may simplify installation.

Adapters

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

Adapters engage the verticals on the edge of a panel to allow perpendicular panels to connect.
 ▶ Specifying, page 185

Product Details

Height can be specified from 89"H to 120"H, in one-inch increments, to accommodate different ceiling heights. Adapters are 121"H when specified as "no base" (to the floor).

Ceiling track allows $1/2"$ of vertical adjustment to accommodate variations in field conditions.

Floor track allows $3/4"$ of vertical adjustment with the 5"H base while the $2 1/2"$ H base allows $1/2"$ of vertical adjustment to accommodate variations at base.

Finished-end adapter caps the exposed vertical edge of the last panel in a run. Surface of the adapter is steel, covered in paint or anodized aluminum for Glass Selections. The plinth, which is included in the finished end assembly, is painted to match the adjacent base trim. Finished-end adapter adds approximately $13/16"$ to the length of the wall.
 ▶ See *Feature Strip Application*, page 72.

L-adapter allows a perpendicular panel to attach at the end of a panel. Surface of the adapter is steel, covered in paint or anodized aluminum for Glass Selections.

► See *Feature Strip Application*, page 72.

T-adapter allows a perpendicular panel to attach on the centerline between two panels joined in line.

► See *Feature Strip Application*, page 72.

X-adapter allows two perpendicular panels to attach on opposite sides of the centerline between two panels joined in line.

Tip: Base trim projects 1/16" from the face of the panel.

► See *Feature Strip Application*, page 72.

Panel end cut kit can be used to finish the end of a cut panel so that it functions like a conventional panel and can make connections to an adjacent panel, door frame, or mini end. Surface of the adapter is painted steel.

Tip: Panel end is included in panel end cut kit.

Connections

Any panel, door frame, or mini end can be connected to an adapter.

Feature strips, ordered separately, join panels and other components to adapters and prevent light and sound leaks. Feature strip can be cut on site to provide access to the integral slotted verticals so that panel-supported components can be attached. To rearrange panels, feature strips can be removed and reused.

► Page 72

Tip: Anodized feature strips are designed for use with Glass Selection anodized door and glass frames. They are not compatible with upholstered panels.

Recessed

Overlapping

Overlapping or recessed finished-end ceiling track is available for use with finished end adapter. This ceiling track component finishes the end of the ceiling track in the same way that the finished end adapter completes the exposed vertical edge of the last panel.

► Page 56

Blocked slots occur on the edges of some panels in configurations with adapters. This makes it impractical to attach panel-supported components at these points.

► For an overview of the planning choices, see *Centerline Versus Interior Dimension Planning*, page 74.

When planning with 2 1/2" high base, specify adapter with "no base" (to the floor), which will be standard at 121"H and will be field cut by installer to final length.

Tip: Base trim is ordered separately.

T-adapters, unlike T-posts, produce a simpler, cleaner visual by presenting one joint instead of two.

Exact fit between fixed elements, such as building columns, is possible by using a panel end cut kit. The cut panel behaves exactly like a conventional panel but its width dimension can be modified on site to match field conditions.

Tip: You cannot hang furniture on a cut panel.

► See *Cut Panels*, page 67.

Wiring & Cabling

Adapters do not accommodate vertical wire and cable routing.

Surface Materials

Finished-end adapter and L-adapter

- Paint
- Anodized aluminum

Posts

Note: All planning and application guidelines contained in this section of the specification guide are based on the requirement that ceiling track is connected to a ceiling in order to properly support the wall components as shown.

2-way, 3-way, and 4-Posts join panels in a variety of configurations.
 ▶ Specifying, page 188

Product Details

Height can be specified from 89"H to 120"H, in one-inch increments, to accommodate different ceiling heights.

Ceiling track allows $1/2"$ of vertical adjustment to accommodate variations in field conditions. Floor track allows $3/4"$ of vertical adjustment to accommodate variations at base.

Floor track allows $3/4"$ of vertical adjustment with the 5"H base while the $2 1/2"$ H base allows $1/2"$ of vertical adjustment to accommodate variations at base.

**2-way, L-post**

L-post has a square 90° profile.

**4-way, X-post**

X-post has four 90° square profiles.

Slotted verticals are available when using posts.

► For an overview of the planning choices, see *Centerline Versus Interior Dimension Planning*, page 74.

Connections

Any panel, door frame, or mini end can be connected to a post.

**3-way, T-post**

T-post has two 90° square profiles.

**3-way, Y-post**

Y-post is made up of a 90° corner and two 135° angles.

Configurations for posts include in-line, L, T, X, V, and Y.
Tip: Base trim projects 1/16" from the face of the panel.

**2-way, In-line post**

In-line post has a 180° straight profile.

**2-way, V-post**

V-post is available either 120° or 135°.

Feature strips, ordered separately, join panels and other components to posts and prevent light and sound leaks. Feature strip can be cut on site to provide access to the integral slotted verticals so that panel-supported components can be attached. To rearrange panels, feature strips can be removed and reused.
► Page 16

Posts are often more appropriate when planning with interior room dimensions.
Tip: Remember to allow for post dimensions when calculating the overall length of a wall.

► See *Centerline Versus Interior Dimension Planning*, page 74.

Wiring & Cabling

Posts can be used to vertically route power and cable infeeds down from the ceiling or up from the floor.

Surface Materials**Post**

- Anodized aluminum

Base trim

- Paint

Application Topics**Feature Strip Application**

► Page 72

Centerline Versus Interior Dimension Planning

► Page 74

Feature Strip Application

Use the table at below to determine the quantity of individual feature strips you need in specific applications.

Tip: For correct fit of feature strips, you must specify type of components that will be used in conjunction with feature strips. Example: One painted component and one upholstered component.

► See page 198 to order feature strips.

Two kinds of feature strips are available. They are available individually (style numbers **GPFS1** or **GPFSHP1** available 121"H for "no base" or in 1" increments for 5"H and 2 1/2"H base) or in packages of 25 (style numbers **GPFS25** or **GPFSHP25** available 121"H for "no base" or in 1" increments for 5"H and 2 1/2"H base)

When positioned next to a door frame, the mini end should be specified with "no base" and will be field-cut by the installer to final length.

In-line feature strips are used when joining two surfaces on the same plane. They can be specified to correspond to the installation height, or 120"-long feature strips are available to be field-cut.

To rearrange panels, painted and anodized feature strips can be removed and reused. Fabric covered feature strips cannot be reused, and will need to be replaced as part of rearrangement process.

Half feature strips are used in combination with in-line feature strips for inside corner applications. *Tip: To ensure best fit for feature strips, specify a wall application option.*

Specify both a painted and fabric half feature strip for Clerestory panels with one painted and one upholstered component.

When ordering painted feature strips, specify the type of wall application for the adjoining components.

For use with two painted components.

For use with one painted and one upholstered component.

For use with two upholstered components.

For Clerestory panels, you can specify two different feature strips when the solid-panel finish is different from the upper-glass frame finish.

Furniture reveal strips, ordered separately, are positioned between two sections of in-line feature strip to allow access to one set of panel slots when a single component is mounted on a Privacy Wall panel. When components are mounted side by side, both sets of slots are left exposed, and there is no need for a furniture reveal strip. Furniture reveal strips are painted to match the adjacent wall panel or to match the component bracket.

Tip: Use of hang-on components with enhanced core panels may reduce acoustic effectiveness.

► Page 79

Furniture reveal strips are used when hanging components on Privacy Wall panels. The furniture reveal strip finishes off one half of an in-line panel joint, while allowing access to panel slots. They are cut to size from a 34" length as part of the installation process. Typically, one 34" strip is adequate to trim out both edges of a worksurface or storage cabinet.

► Page 198

Privacy Wall uses the same furniture interface as Answer. When specifying overhead storage and worksurfaces to be mounted on Privacy Wall, select the Answer bracket option.

Product	Number of in-line feature strips GPFS, GPFS1, GPFS25, or GPFS25A	Number of half feature strips GPFSHP, GPFSHP1, GPFSHP25, or GPFSHP25A
Panel	2	0
Hinged door frame	2	0

Surface Materials

Feature strip

- Paint
- Fabric
- Anodized aluminum

When hanging furniture on panels, optional acoustic seals can be field-applied to the cantilever or shelf brackets to minimize sound transmission through the wall.

Low-voltage switches can be positioned on an in-line feature strip between two panels (solid or glass) or between a panel and a door frame. The feature strip is cut and notched during installation to accommodate the switch.

Centerline Versus Interior Dimension Planning

Planning Choices

Architects and designers typically use either centerline planning or inside-dimension planning when laying out walls. Privacy Wall supports either approach or a combination. Your decision about which strategy to use will depend on your building and integration and interface issues. Each approach offers its own advantages and disadvantages.

Centerline planning

concerns the distance between the centerline of walls; the thickness of the walls is a secondary consideration. For example, two parallel walls that are $2\frac{3}{8}$ " thick and with centerlines that are 96" apart will produce an interior space that is 93 $\frac{5}{8}$ "W.

Interior planning concerns the physical dimensions of the room created by walls. For example, to create an interior space that is 96"W, two parallel walls that are $2\frac{3}{8}$ " thick would have a centerline dimension of 98 $\frac{9}{16}$ ".

Using Adapters

Advantages

- Allows centerline planning.
- No creep added to the dimensions of the run of panels in one axis.
- Lower cost than using posts at T- and X-corners.
- Clean visuals. No double feature strips visible when the back side of the wall doesn't have perpendicular panels.

Disadvantages

- Vertical slots in some panels will be blocked by overlapping panels and therefore cannot accommodate panel-supported storage or worksurface components.

Using Posts

Advantages

- Ideal for interior dimension planning because the inside dimensions of the room will always match the dimensions of the panels that make up the wall.
- Vertical slots will never be blocked, so adding panel-supported storage or worksurfaces is never a problem.

Disadvantages

- Must allow the $2\frac{1}{16}$ " increment that each L-post adds and $2\frac{1}{16}$ " increment that each T-post adds to the length of the run of panels.

- Posts and two feature strips will be visible on the opposite side of the wall if no panels are joined at those points.
- More expensive than using adapters at T- and X-corners.

Combining Techniques

In some applications it is desirable to combine centerline planning with inside-dimension planning. For example, you might want a front wall that produces alignment in a building that has columns or window elements on centerlines that are spaced 96" apart. But along the cross walls, you may want to use inside-dimension planning to ensure that standard-sized furniture components, such as workspaces and bins, will match panel dimensions.

Interior dimension planning along cross walls means that vertical slots will be available to attach storage components and workspaces to cross wall panels.

Centerline planning along front wall allows fin walls to match centerlines of building elements such as columns, window frames, and ceiling grid.

Adapters and posts add different dimensions to a run of panel depending on the configuration.

Base Trim Details

Panels

In-line

Inside corner

Continuous base trims meet at an inside corner regardless of angle.

Outside corner

One-piece outside corner base trim must be specified to trim outside panel corners regardless of angle.

Doors

Inside corner

Outside corner

Two doors separated by a post

Inside slider door

Outside slider door

Etched and Pattern Glass Planning

Planning Guidelines

You should consider the orientation of the faces of etched and pattern glass in relation to the insides and outsides of rooms.

Etched glass should be installed with the rough side facing the inside of the room and the smooth side facing the corridor. This placement allows for easier cleaning of the more heavily traveled corridor.

Pattern glass should be installed with the rough side facing the corridor and the smooth side facing the inside of the room. This placement allows more people to appreciate the visually interesting and attractive side of the glass.

When using etched and/or pattern glass on the slider doors, the glass will be oriented as outlined above when the door is positioned on the outside of the room. If slider doors are to be positioned on the inside of the room and glass surfaces are desired to be oriented outlined above, the slider door units must be ordered through specials.

Clerestory panels that are ordered with split finish surfaces or single sided electricals will be oriented to surface one and surface two. When determining how to order these, keep in mind that glass surfaces are always oriented as follows: for etched glass, the rough side will be oriented to surface two; for pattern glass, the rough side will be oriented to surface one.

Etched glass

Satin

Pattern glass

Bamboo
Harp
Mirage

All other glass types

are either rough on both faces or smooth on both faces.

Acoustic Planning Considerations

Overall acoustic performance related to sound transmission can be managed by the type of wall or door selected, optical choices, and additional components.

Utilizing enhanced core versus hollow core will improve acoustic performance.

Adding insulation to mini end assemblies does not improve acoustic performance.

Utilizing overlapping ceiling track versus recessed ceiling will improve acoustic performance.

Sound transmission performance at door openings (slider and reversible) can be improved by adding drop seals to the doors.

Mounting hang-on furniture may reduce acoustic effectiveness.

Specifying electrical components may reduce acoustic effectiveness.

When considering markerboard solutions, keep in mind that ceramic skins will provide better STC performance than glass.

STC Performance—Solid Walls
(Paint, fabric, and markerboard)

Privacy Wall solid panels, as tested per ASTM E90, achieve STC ratings as follows:

- STC 41 for hollow core panels with recessed ceiling track
- STC 42 for hollow core panels with overlapping ceiling track
- STC 45 for enhanced core panels with overlapping ceiling track

Privacy Wall glass panels, as tested per ASTM E90, achieve STC ratings as follows:

- 25 – 26 STC for 1/4" thick tempered unitized glass
- 30 STC for 1/4" thick laminated unitized glass

Glass Selections glass panels, as tested per ASTM E90, achieve STC Ratings as follows:

- 27 STC for 3/8" thick tempered butt-glazed glass
- 30 STC for 1/4" thick laminated unitized glass

How to Power a Panel

Factory-installed components are available to power panels with receptacles in the panel surface, or at the base of the panel. Power infeeds can feed through the ceiling or the floor.

Tip: Bypass cover may be required when specifying recessed ceiling track.

► Page 57

Ceiling infeed can be factory installed in panel to surface power or field installed at base height.

Communication cable, field installed.

Power and communication receptacles are factory installed in the panel surface, or base height.

Modular harness, field installed.

Vertical jumper, factory installed to extend power between power blocks at base height to panel surface power height.

Power blocks, factory or field installed at base height.

Base power infeed

Tip: Multipurpose infeeds can be installed to route power to base from floor or ceiling.

Floor infeed can be factory installed in the panel surface or field installed at base height.

Power blocks can be factory or field installed in the panel surface—can be specified in any combination of base height and surface height location(s). Available only in hollow core panels. Minimum height of power/communication location is 21" AFF. If another power/communication location is required, the minimum height would be 28" AFF. The maximum height for power/communication would be 9" down from the height of the solid panel or 9" down from the height of the clerestory glass.

Tip: For power installation in the panel surface in the field, you must use a power and communication powerkit and cover plate. Powerkits with power blocks and communication openings can only be installed in the field at panel surface height location(s).

Powering a Privacy Wall panel requires five things—power blocks, receptacles, cutouts in the surface of the panel to access the receptacles, a harness or infeed to bring power to the power block, and a cover plate or power and communication base trim to trim the opening.

Power Blocks

Power blocks must be installed in a panel in order to accommodate power receptacles. Power blocks can accommodate receptacles on one side or both sides of a panel.

Solid height location

Clerestory height location

Maximum two locations and base

Varied heights are possible for power blocks in the panel surface—can be specified in any combination of base height and surface height location(s). Available only in hollow core panels. Minimum height of power/communication location is 21" AFF. If another power/communication location is required, the minimum height would be 28" AFF. The maximum height for power/communication would be 9" down from the height of the solid panel or 9" down from the height of the clerestory glass.

Tip: When placing furniture on or in front of a powered panel, review the furniture type and position to avoid obstructing the power or communication termination.

Utilities can be specified on either side of the panel or on both sides. Receptacles can be installed on either side of the panel or on both sides. Fillers can be installed in any unused cutouts.

Power is located in the center of a panel except in Glass Selections frame kits, where power is located 12" from the panel edge.

Tip: If using base trim with power and communication cutout, plan on placing cutouts at right edge of panel.

Power blocks can be located in the base without cutouts to continue distribution of power between panels.

Panel type determines which receptacle locations are available. For example, solid wall panels can have receptacles in any position, but glass wall panels can have receptacles in the base only.

Panel Type	Incremental height	Base
Solid	•	•
Glass	N.A.	•
Clerestory	•	•

Field-installed power-kits, infeeds, and jumpers can be ordered separately and added on site. For installations at incremental height, solid panel surface must be cut carefully to position power block correctly and to accommodate cover plate. Power and communication is available in panel face only.

Receptacles

Receptacles are ordered separately and field installed in power blocks. Separate duplex receptacles are available to engage each of the different circuits that are possible in the electrical system. Receptacles are coded to indicate which circuit and type of ground they engage.

► Page 81

Controlled receptacle must be indicated when tying into the building management system. Duplex receptacles have an option for a factory permanent, pad stamp power icon symbol with the word controlled per compliance with the Energy Code.

USB receptacles are ordered separately and installed on site. They are available in three wiring schematics with multiple line options. USB receptacles offer easy access to two charging ports. Each port provides 1 ampereage of output. USB receptacles conveniently charge a wide range of electronic devices. Some devices may not be compatible.

How to Power a Panel, continued

Installation is done on site. Receptacles snap into power block. Tools are not required for installation.

Cutouts

64"

Power only

Power and communication

Communication only

Power and communication base trim, ordered separately, are factory punched for modular power receptacles and communication outlets. Three kinds are available—power only, power and communication, and communication only.
Tip: Base communication cutouts are designed to accommodate only NEMA faceplates. Cutout is 3"W x 2"H.

Power and communication base trim for Chicago and New York City power, ordered separately, are factory punched for hardwired power receptacles (not by Steelcase) and communication outlets. Two kinds are available—power only, and power and communication.
Tip: Base communication cutouts are designed to accommodate only NEMA faceplates. Cutout is 3"W x 2"H.
Tip: Power cutouts are 4 1/8"W x 2 1/4"H.

The floor track is factory cut at both ends to provide access for multipurpose infeeds that are routed up from the floor.

Power-only

Power and communication

Plastic cover plate, ordered separately, frames receptacles and communication outlets in the panel face. Two kinds of cover plates are available—power only and power and communication. They are required for utilities in the panel surface.
▶ Page 81

Width of panel must be adequate to accommodate cutouts.

- 30"W–60"W for standard panel
- 28.657"W–60"W for modular panel
- Panels that are smaller than 30"W cannot accommodate power or communication in any configuration.

Communication opening is sized to accommodate a standard NEMA-size faceplate, modular furniture faceplate, or Decora mounting strap style outlet supplied by the electrician.

Fillers, ordered separately, fill empty receptacle and communication openings.
Tip: Power and communication filler is not designed for use with the base communication cutout. Fillers for this NEMA-size cutout should be sourced locally.

Infeeds

Ceiling infeed

Ceiling infeeds are factory installed to bring power to a power block installed in the panel surface. Harness orientation is standard on the left side when facing surface 1.

Tip: Panels that are less than 24"W are not factory punched for infeeds.

Floor infeed

Floor infeeds, for use with raised floor systems, are factory installed to bring power to a power block installed in the panel surface. Harness orientation is standard on the left side when facing side 1. Factory-installed infeeds extend a minimum of 12' from the panel.

Tip: Panels that are less than 24"W are not factory punched for infeeds.

Vertical jumper

Vertical jumper is factory installed to extend power between power blocks at base height to panel surface power height. Jumper can also be field installed to achieve same configuration.

Base power blocks always receive their power from field-installed harnesses or factory-installed jumper harnesses.
▶ Page 84

Mini end

Multi-purpose infeed

Field-installed multi-purpose infeed can be used to bring power from the ceiling or floor by routing it through an adjacent component such as a mini end or post.

Base power infeed

Field-installed base power infeed can bring power from a floor monument to a power block in the base of a panel. Floor infeed harness at the base occupies one receptacle location in the base power block.

Field-installed modular harness can bring power from a power block installed in the base of an adjacent panel.

► To calculate harness length, see page 88.

Harness-to-harness connector or branching harness-to-harness connector, ordered separately, links harnesses. Harness-to-harness connector allows multiple harnesses to connect to allow power networks to branch.

End of the power infeed can be hardwire or modular. Hardwire allows the electrician to make a conventional connection to the building's power inside a junction box. Modular allows the infeed to connect to any corresponding modular connector or harness using a harness-to-harness connector. This is the same modular connector used by Answer, Montage, and Architectural Solutions Modular Power System.

Modular flush faceplate is ordered separately for the modular surface power infeeds to hardwire to a junction box. Utilize style number **GAPFCMX**, **GAPFCMY**, or **GAPFCMZ**, depending on your required wiring schematic. It allows modular connector to snap into position. This allows walls to be disconnected, moved, and reconnected later.

Glass panels cannot accommodate vertical routing of power harnesses through the glass portion of the panel. Use adjacent panels, mini ends, or door frames to accommodate a field-installed multipurpose infeed.

Tip: A power switch installed in a door frame will block the path of a multipurpose infeed.

Chicago and New York City electrical code

requires that all power be hardwired in the field. Modular power systems are not permitted. All panels can be hardwired on site using conventional electrical components.

Desk or ADA power and communication in Chicago and New York City can be accommodated in two ways.

Specify the Chicago/New York City hardwire power prep option

and the factory will cut the panel at desk (34" AFF) and/or ADA height (21" AFF) on one surface of the panel.

This allows the electrician to install a Chicago/New York City junction box and hardwire standard Decora-style receptacle(s) in the field.

Order power/communication Chicago/New York City junction box and cover plate separately. Only power/communication is available with this option.

Tip: Hardwire power boxes cannot be double sided.

New York City/Chicago prep option requires use of Privacy Wall cover plate, ordered separately.

► Page 81

San Francisco electrical code requires that base power infeeds be encased in metallic liquid-tight conduit.

Electrician can cut solid or Clerestory panels in the field and install conventional components (junction box, receptacle, outlet cover, and conduit) as in typical drywall construction.

Base power for panels installed in Chicago or New York City is hardwired in the field using conventional components (Decora-style receptacle, junction box, conduit) supplied by the electrician.

Tip: Order Chicago/New York City base trim.

All Privacy Wall electrical components

are listed by Underwriters Laboratory (UL) and certified by the Canadian Standards Association (CSA).

All Steelcase electrical systems are designed in compliance with the National Electrical Code (NEC) and Canadian Electrical Code (CEC) to function as a multiwire branch circuit. Installations should be made in accordance with the NEC or CEC provisions for multiwire branch circuits.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper installation of electrical equipment.

Specifying

For guidelines about the steps to specify power components for a panel, see *Power Options*.

► Page 108

Overview of Powered Panels

Power in Base

Power in the base of a solid or glass panel
can be energized using field-installed harnesses or infeeds.

Power source A:
Field-installed harness from adjacent panel with power in base.
▶ Page 108

Power source B:
Field-installed multipurpose infeed from ceiling through hollow core in solid panel.
▶ Page 108

Power source C:
Field-installed multipurpose infeed from floor.
▶ Page 108

Power source D:
Field-installed base power infeed from floor monument or adjacent wall. Occupies one receptacle location.
▶ Page 108

Power in Panel Surface

Power source E:
Factory-installed ceiling infeed.
▶ Page 108

Power source F:
Factory-installed floor infeed.
▶ Page 108

DEFAULT

Default in SmartTools Power source G:
Factory-installed vertical jumper. Base must receive power using one of the approaches shown at the top of the page. When base/surface power combinations are specified, a jumper will be factory installed.
▶ Page 108

Power blocks can be located in the base without cutouts to allow for distribution of power (base to base or surface to base) or to bring power from floor or ceiling.

Power in Panels with Glass including Clerestory

Power cannot be routed vertically through the glass portion of a Clerestory panel so surface power receptacles in glass panels always receive power from below.

Tip: Power block in base doesn't have to be expressed. You may choose to use it only as a connection point for an infeed and not install base trim with receptacle openings.

Power source F:
Factory-installed floor infeed.
► Page 108

DEFAULT

Default in SmartTools Power source G:
Factory-installed vertical jumper. Base must receive power using one of the approaches shown on previous page.
► Page 108
Tip: When base and surface power combinations are specified, a jumper will be factory installed.

Adjacent mini end can be used to route a field-installed multipurpose infeed. Factory-installed vertical jumper can extend power to panel surface power.
Tip: When base/panel surface power combinations are specified, a jumper will be factory installed.

Adjacent door frame can be used to route a field-installed multipurpose infeed.
Exception: Switch installed in routing side of door frame will block harness.

Wiring Schematics

Details for the Electrician

Privacy Wall modular power components are offered in three different wiring schematics to allow you to match your specific wiring strategy to any typical building wiring plan.

Tip: All the components in an electrical system must use the same wiring schematic. The components are color coded and keyed to make it impossible to connect mismatched parts.

Black = Four-circuit, 3+1

Brown = Four-circuit, 2+2

Rust = Three-circuit, separate neutrals

Shared neutral conductors = 10 gauge

Separate neutral conductors = 12 gauge

Hot conductors = 12 gauge

Grounding conductors = 12 gauge

Four-Circuit, 3+1

In the four-circuit 3+1 schematic, circuits 1, 2, and 3 are distributed from the first circuit panel and are supported with one shared neutral and one shared ground. Circuit 4 is distributed from a second circuit panel and is supported with a separate neutral and ground.

On a single 3-phase circuit panel, all four circuits are distributed as shown.

Four-Circuit, 2+2

In the four-circuit 2+2 schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel and are supported with one shared neutral and one shared ground. Circuits 3 and 4 are distributed from a second circuit panel and supported by their own shared neutral and ground.

On a single 3-phase circuit panel, all four circuits are distributed as shown.

On a split-phase circuit panel, all four circuits are distributed as shown.

Three-Circuit, Separate Neutrals

In the three-circuit, separate neutral schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel. Each circuit is supported with its own neutral and a common ground. Circuit 3 is distributed from the second circuit panel and is supported by its own neutral and ground.

On a single 3-phase circuit panel, three circuits are distributed as shown.

On a split-phase circuit panel, three circuits are distributed as shown.

How to Calculate Power Needs

Use This to Determine How Many Power-Ins You'll Need

When planning a power network, you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

If your usage is not known in advance:
The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. This provides up to 30 receptacles for each 3-circuit power-in.

If your usage is known in advance:
Add up the amperage used by each piece of equipment in the workstation. Whenever you reach 60 amps (20 amps times 3 circuits) from items that are likely to be used at the same time, you have reached the limit for a single power-in. Specify another power-in and continue until all equipment is powered.

If the circuits will normally be subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires that circuit capacity be "de-rated" by 20 percent. Therefore, treat circuits used for continuous loads as if they were rated at 16 amps instead of the regular 20 amps.

Try to anticipate future increases in power requirements and build some excess capacity into your plan.
▶ See table at right for typical and actual amperage usages for components.

To calculate amperage when the wattage of a device is known, divide watts by 120.

Some appliances, such as large copiers, coffee makers, or space heaters require most of the current available on a 20-amp circuit. It is recommended that such devices be supplied with their own receptacle/circuit, directly from the building. This leaves the capacity of the furniture circuits available for the more dynamic requirements of the office equipment.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper planning of electrical circuits in your locale.

Approximate power consumption for common devices

• Device	• Wattage	• Amperage	• Voltage	• Number of Devices Supported on Single 20 Amp Circuit

Height-Adjustable Desk (High Power Consumption)*	550	4.58	120	3

Tip: These calculations are estimations and are meant solely for informational purposes. It is important to conduct proper power planning for each installation to prevent overloading a circuit.
** Refer to the Height-Adjustable Desks Specification Guide for specific product information.*

Field-Installed Modular Harness Length Guidelines

Modular harnesses

allow power to be extended from one power block to another. Use the guidelines on this page to determine harness length.

► Page 82

Tip: For field-installed ADA-to-desk connections, order desk-height to ADA-height jumper.

Tip: Harnesses stretch 3". For example, a 33" harness will allow for a 33" to 36" connection.

Tip: When two powered panels are separated by a third panel, calculate the harness length by adding the result of these tables plus the width of the third (middle) panel.

Tip: Power is located in the center of a panel except in Glass Selections frame kits, where the center of the power is located 12" from the panel edge. All GS frame kits connect with the same size harnesses, regardless of width.

GS = Glass Selections

Desk or ADA to Base within Same Panel

Solid Wall Panels

Tip: Order ceiling track, feature strip, and continuous base trim separately.

Tip: Enhanced core panels can only be specified up to 48" in width and have an insulated core for improved acoustical performance.

Tip: Standard Privacy Wall heights are 89" through 120".

Tip: Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

For Canadian Pricing

Multiply U.S. Price by the Canadian price factor.

Surface	Panel surface (must specify for each surface side – 1 and 2), continued		
Materials, continued	• Fabric price group 10		
	– 6"W – 30"W	+\$1635	Specify fabric color number for surface 1 and/or surface 2.
	– 30 ¹ / ₁₆ "W – 60"W	+\$2863	
	• Fabric price group COM		► See <i>Surface Materials Reference Manual</i> .
	– 6"W – 30"W	+\$ 260	
	– 30 ¹ / ₁₆ "W – 60"W	+\$ 338	
	• 7610 White Markerboard		Specify markerboard for surface 1 and/or surface 2.
	– 6"W – 24"W	+\$ 710	
	– 24 ¹ / ₁₆ "W – 36"W	+\$ 762	
	– 36 ¹ / ₁₆ "W – 48"W	+\$ 816	
Post Extension	• Post extensions modified to accommodate recessed ceiling track (ordered separately)	No cost	Specify with post extensions for recessed ceiling track interface.
	• Post extensions modified to accommodate overlapping ceiling track (ordered separately)	No cost	Specify with post extensions for overlapping ceiling track interface.
Base Height	• 5"H base	No cost	Specify to accept 5"H base.
	• 2 ¹ / ₂ "H base	+\$ 134	Specify to accept 2 ¹ / ₂ "H base.
Electrical Power (for panels 28.657"W – 60"W)	Power/communication		
	• No power/communication	No cost	Specify with no power/communication.
	• Panel surface only	No cost	Specify with power block location at panel surface.
	• Base only	+\$ 331	Specify with power block location at base.
	• Base and Panel surface	+\$ 525	Specify with power block location at base and panel surface.
	• NYC/CHI	No cost	Specify with NYC/CHI power.
	• Communication only	No cost	Specify with communication only.
	Panel surface power (hollow core only)		
	• No power location	No cost	Specify with no power locations.
	• One power location	No cost	Specify with one power location.
	• Two power locations	No cost	Specify with two power locations.
	Panel surface power infeed (hollow core only)		
	• Floor hardwire infeed	+\$1207	Specify with bottom left hardwire infeed.
	• Ceiling hardwire infeed	+\$1207	Specify with top left hardwire infeed.
	• Floor modular infeed	+\$1266	Specify with bottom left modular infeed.
	• Ceiling modular infeed	+\$1266	Specify with top left modular infeed.
	Wiring schematic		
	• 3+1	No cost	Specify with 3+1 power.
	• 2+2	No cost	Specify with 2+2 power.
	• 3SN	No cost	Specify with 3SN power.
	Panel surface power 1 location (hollow core only)		
	• 21" – 111" above finished floor	No cost	Specify parametric height location dimension on 1" increment.
	Panel surface power 1 configuration (hollow core only)		
	• Panel surface 1	No cost	Specify with single sided power in panel surface 1.
	• Panel surface 2	No cost	Specify with single sided power in panel surface 2.
	• Panel surface 1 and 2	+\$ 40	Specify with power back-to-back in panel surface 1 and 2.
	Panel surface 1 surface power 1 type (hollow core only)		
	• NYC/CHI	+\$ 79	Specify with NYC/CHI in panel surface 1.
	• Communication only	+\$ 479	Specify with communication in panel surface 1.
	• Power only	+\$ 479	Specify with power in panel surface 1.
	• Power/communication	+\$ 479	Specify with power/communication in panel surface 1.

Tip: Enhanced core panels are intended for use with overlapping ceiling track in order to maximize their acoustical properties.

Tip: If 2¹/₂" base height is specified, base power is not selectable. The 5" base height only allows for a power block in the base.

Tip: Panel surface power is only available in hollow core panels.

Tip: If no power/communication, NYC/CHI power or communication only is selected, then wiring schematic is not required.

Tip: The surface power infeed must be selected for panels specified with 2¹/₂"H base and panel surface power.

Tip: When the 5"H base is specified, the infeed must be ordered separately for both Surface and/or base location, as the default includes the power block in the base.

Tip: Order the flush face-plate for the modular surface power infeeds separately. Utilize style number **GAPFCMX**, **GAPFCMY** or **GAPFCMZ**, depending on your required wiring schematic.

Tip: Order power and communication and power only cover plates separately.

**For Canadian Pricing**

Multiply U.S. Price by the Canadian price factor.

► See page 1 for details.

Solid Wall Panels, continued

► Options, on previous page

Tip: Panels that are less than 24"W are not factory punched for infeeds.

Tip: Panel surface power locations cannot exceed two differing locations. Height can be configured parametrically in 1" increments per the stated range.

Tip: If NYC/CHI power is selected, then it must be selected throughout the configuration.

Electrical Power (for panels 28.657"W – 60"W)	Power/communication		
	• No power/communication	No cost	Specify with no power/communication.
	• Panel surface only	No cost	Specify with power block location at panel surface.
	• Base only	+\$ 331	Specify with power block location at base.
	• Base and Panel surface	+\$ 525	Specify with power block location at base and panel surface.
	• NYC/CHI	No cost	Specify with NYC/CHI power.
	• Communication only	No cost	Specify with communication only.
	Panel surface power		
	• No power location	No cost	Specify with no power locations.
	• One power location	No cost	Specify with one power location.
	• Two power locations	No cost	Specify with two power locations.
	Wiring schematic		
	• 3+1	No cost	Specify with 3+1 power.
	• 2+2	No cost	Specify with 2+2 power.
	• 3SN	No cost	Specify with 3SN power.
	Panel surface power 1 location		
	• 21"–79" above finished floor	No cost	Specify parametric height location dimension on 1" increment.

Tip: Markerboard surface cannot exceed 48"W or 120" in height.

Tip: The infeed must be ordered separately for both surface and/or base location, as the default includes the power block in the base.

Tip: If no power/communication, NYC/CHI power or communication only is selected, then wiring schematic is not required.

Tip: Order the flush face-plate for the modular surface power infeeds separately. Utilize style number **GAPFCMX**, **GAPFCMY**, or **GAPFCMZ**, depending on your required wiring schematic.

Tip: Order power and communication and power-only cover plates separately.

Tip: Panels that are less than 24"W are not factory punched for infeeds.

Tip: Panel surface power locations cannot exceed two differing locations. Height can be configured parametrically in 1" increments per the stated range.

Tip: If NYC/CHI power is selected, then it must be selected throughout the configuration.

Power Options

This page guides you through specifying Privacy Wall panels. Use these steps to specify factory-installed power components or communication openings in panels, or to have the factory alter panels to accommodate field-installed power.

Tip: Chicago and New York City electrical code requires field-supplied components to be field installed.

Factory-installed power components are available in all Privacy Wall panels. Use the options on this page to tell the factory how to assemble your panels so they include the power components you want.

Field-installed power components are required in New York City and Chicago. To streamline installation, use the options on this page to tell the factory how to modify the panels so they are ready to accept the power components you must order or supply separately. For details about how power is accommodated in Privacy Wall panels, see:

- ▶ *How to Power a Panel*, page 80

- ▶ *Overview of Powered Panels*, page 84

Specifying

Panels

- 1** Choose appropriate panel width to accommodate power and communication receptacles. See the table below for minimum widths.

Power and Communication

Panel surface

- 28.657"W solid or clerestory panels

At base

- 28.657"W panels

- 2** **Power/Communication**

Specify where power and/or communication will be required:

- No power/communication
- Base only
- Surface only
- Base and panel surface
- New York City/Chicago prep
- Communication only

- 3** **Power schematic**

Specify the power schematic (if no power/communication, NYC/CHI or communication only, power schematic is not specifiable):

- 4-circuit, 3+1
- 4-circuit, 2+2
- 3-circuit, separate neutrals (3SN)

- 4** **Panel Surface Power**

Specify the number of power and/or communication required in the panel surface (if base only or no power/communication is selected, then no power location is required):

- No power location
- One power location
- Two power locations

- 5** **Surface power 1 location**

Specify one or more of the following surface power locations that is available on the panel type chosen:

Solid panel – one location

- 21" minimum AFF
- 111" maximum AFF (10'0" panel)

Tip: Adjusts in 1" increments.

Clerestory panel – one location

- 21" minimum AFF
- 79" maximum AFF (10'0" panel)

Tip: Adjusts in 1" increments.

- 6** **Surface power 1 configuration**

Specify the panel surface side(s) where the first power and/or communication will be placed:

- Surface 1 (single side)
- Surface 2 (single side)
- Surface 1 and 2 (back-to-back)

- 7** **Surface 1 surface power 1 type**

Specify the power and/or communication type if surface 1 or surface 1 and 2 are selected:

- Power
- Power/communication
- Communication only
- NYC/CHI

- 8** **Surface 2 surface power 1 type**

Specify the power and/or communication type if surface 2 or surface 1 and 2 are selected:

- Power
- Power/communication
- Communication only
- NYC/CHI

- 9** **Surface power 2 location**

Specify one or more of the following surface power locations that is available on the panel type chosen:

Solid panel – one location

- 28" minimum AFF
- 103" maximum AFF (10'0" panel)

Tip: Adjusts in 1" increments.

Clerestory panel – one location

- 28" minimum AFF
- 72" maximum AFF (10'0" panel)

Tip: Adjusts in 1" increments.

- 10** **Surface power 2 configuration**

Specify the panel surface side(s) where the second power and/or communication will be placed:

- Surface 1 (single side)
- Surface 2 (single side)
- Surface 1 and 2 (back-to-back)

- 11** **Surface 1 surface power 2 type**

Specify the power and/or communication type if surface 1 or surface 1 and 2 are selected:

- Power
- Power/communication
- Communication only
- NYC/CHI

- 12** **Surface 2 surface power 2 type**

Specify the power and/or communication type if surface 2 or surface 1 and 2 are selected:

- Power
- Power/communication
- Communication only
- NYC/CHI

- 13** **Utility choices by locations**

Cutouts are only available in the positions you specified for power locations in steps 4 through 12. If required, ADA height is 21" AFF and desk height is 34" AFF.

Tip: For New York City and Chicago power prep options, no specification for utility choice at base height is needed because you add components in the field.

- 14** **Remember to specify**

receptacles, cover plates, and power and communication base trim to finish your panel.

Tip: For Chicago and New York City installations, electrician must supply conduit, receptacles and junction boxes for base of panel. Junction box is available from Steelcase and is required when using Privacy Wall power and communication cover plates.

Infeeds

- 15** **Power infeeds**

When surface power is selected in solid or clerestory panels, a power block will be defaulted in the base with a harness connecting the power in the surface to the base. The infeed must be ordered separately, as it will not be factory installed. If this is not desired, this can be deselected to have panels with factory-installed power blocks to have a factory-installed power infeed harness to supply power from the ceiling or floor. Factory-installed infeeds extend a minimum of 12' from the panel. Specify one of the following:

- Hardwire ceiling infeed
- Modular ceiling infeed
- Hardwire floor infeed
- Modular floor infeed

Tip: If you do not specify one of the above infeeds, a hardwire infeed, located top left in a solid panel and bottom left in a Clerestory panel, will be provided, only if you de-select a power block in the base.

Example

- One GPSP
- 9'0" ceiling height
- 42"W panel
- Standard configuration
- Hollow core
- 4843 Linen side 1
- 7610 Markerboard side 2
- Post extension for recessed ceiling track
- 5"H base height
- Base and panel surface power
- 3+1 wiring schematic
- Two power locations in surface
- Surface power 1 location – 21" AFF
- Surface power 1 configuration – surface 1 and 2
- Surface 1 surface power 1 type – power
- Surface 2 surface power 1 type – power
- Surface power 2 location – 54" AFF
- Surface power 2 configuration – surface 1
- Surface 1 surface power 2 type – power/communication
- Hardwire multipurpose infeed (3+1) – ordered separately

Tip: Order receptacles, cover plates, and power and communication base trim separately.

Butt-Hinged Door Frames

Tip: Glass door is available up to 108" ceiling height.

Tip: For information regarding Etched and Pattern Glass Planning.
▶ Page 78

Tip: Recommended for use with Privacy Wall only. Not for use with Glass Selections.

Tip: Door frame glass option is available on transom door frames only.

Tip: Standard Privacy Wall heights are 89" through 120".

Post Extension (For panels 30"W through 60"W)	• Post extensions modified to accommodate recessed ceiling track (ordered separately)	No cost	Specify with post extensions for recessed ceiling track interface.
	• Post extensions modified to accommodate overlapping ceiling track (ordered separately)	No cost	Specify with post extensions for overlapping ceiling track interface.
Base Height	• 5"H base	No cost	Specify to accept 5"H base.
	• 2 ¹ / ₂ "H base	+\$ 134	Specify to accept 2 ¹ / ₂ "H base.
Electrical Power (for panel)	Power/communication		
	• No power/communication	No cost	Specify with no power/communication.
	• Base only	+\$ 331	Specify with power block location at base.
	Wiring schematic		
	• 3+1	No cost	Specify with 3+1 power.
	• 2+2	No cost	Specify with 2+2 power.
	• 3SN	No cost	Specify with 3SN power.
Related Products			
	• Ceiling tracks		► Page 190
	• Continuous base trim		► Page 200
	• Feature strips		► Page 196
	• Power receptacles		► Page 205
	• Power and communication cover plate		► Page 206
	• Infeeds		► Page 207
	• Modular harnesses		► Page 209
	• Field-installed powerkits		► Page 211
	• Cornice track		► Page 194

Tip: If 2¹/₂" base height is specified, base power is not selectable. The 5" base height only allows for a power block in the base.

Tip: When the 5"H base is specified, the base power block does not include infeed. It must be ordered separately, if needed.

Tip: Order the flush face-plate for the modular surface power infeeds separately. Utilize style number **GAPFCMX**, **GAPFCMY**, or **GAPFCMZ**, depending on your required wiring schematic.

Tip: Panels that are less than 24"W are not factory punched for infeeds.

For Canadian Pricing
Multiply U.S. Price by the Canadian price factor.

Glass Selections All-Glass Frame Kits

Tip: Order ceiling track, feature strip, and continuous base trim separately.

Tip: Frame kits are assembled in the field. Butt joints must be glazed with glazing tape or silicone sealant to be code-compliant.

Tip: Frame kits include two power blocks per kit.

Tip: When power option is specified, connector harness is included to join power blocks with frame kit.

Glass Selections Clerestory Wall Panels

Transom-Aligned Top Lite

Tip: Order ceiling track, feature strip, and continuous base trim separately.

Tip: Standard Privacy Wall heights are 89" through 120".

Tip: For information regarding Etched and Pattern Glass Planning.
► Page 78

Tip: Panels that are wider than 48" may not be suitable for application in certain areas where local building codes have specific provisions for seismic activity.

Tip: Customer's Own Glass is available as a special at this time.

	• Two power locations	No cost	Specify with two power locations.
	Panel surface power infeed		
	• Floor hardwire infeed	+\$1207	Specify with bottom left hardwire infeed.
	• Floor modular infeed	+\$1266	Specify with bottom left modular infeed.

► Options, continued on next page

Tip: Markerboard surface cannot exceed 48"W or 120" in height.

Tip: If 2¹/₂" base height is specified, base power is not selectable. The 5" base height only allows for a power block in the base.

Tip: The surface power infeed must be selected for panels specified with 2¹/₂"H base and panel surface power.

Tip: The infeed must be ordered separately for both surface and/or base location, as the default includes the power block in the base.

Tip: If no power/communication, NYC/CHI power or communication only is selected, then wiring schematic is not required.

Tip: Order the flush face-plate for the modular surface power infeeds separately. Utilize style number **GAPFCMX**, **GAPFCMY**, or **GAPFCMZ**, depending on your required wiring schematic.

Tip: Order power and communication and power-only cover plates separately.

Tip: Panels that are less than 24"W are not factory punched for infeeds.

Tip: Panel surface power locations cannot exceed two differing locations. Height can be configured parametrically in 1" increments per the stated range.

Tip: If NYC/CHI power is selected, then it must be selected throughout the configuration.

Glass Selections Full-Height Butt-Hinged Door Frame

► Need help?
Product details,
page 38

Standard Includes

- Height: 89" – 120", in one inch increments
Exception: maximum height of 42" wide door is 108" ceiling height.
- Factory prep for hinges
- Plinths for base trim: paint price group 1 or I anodized aluminum
- Frame: paint price group 1 or anodized aluminum
Tip: Door hardware is ordered separately.

Required to Specify

- 1 Style number
 - 2 Height (see below under Required Selections)
 - 3 Width (see below under Required Selections)
 - 4 Post extension (see below under Required Selections)
 - 5 Paint color number for door frame
 - 6 Paint color number for base
 - 7 Options, if selected (see below)
- See *Surface Materials*, page 256.

Tip: 42" wide door frame has maximum height 108".

Tip: In order to ensure proper engagement at the drop seal, door frame cannot accommodate any fluctuation in floor height when drop seal is specified.

	Required Selections	U.S. Price	Required to Specify
Height	• 89" – 120"	No cost	Specify height in 1" increments.

Width	• 40" • 42"	No cost No cost	Specify 40". Specify 42".

Furniture Reveal Strips

Tip: Furniture reveal strips are used when hanging components on Privacy Wall panels. The furniture reveal strip finishes off one half of an in-line panel joint, while allowing access to panel slots. They are cut to size from a 34" length as part of the installation process. Typically, one 34" strip is adequate to trim out both edges of a worksurface or storage cabinet.

Standard Includes	Required to Specify
► Need help? Product details, page 72 Furniture reveal strip(s): paint price group 1	- Style number - Wall application number (see below under Required Selections) - Paint color number - Options, if selected (see below) ► See <i>Surface Materials</i>, page 256.

Thread

Power Track and Power Track Infeeds

Power hub

Product Details

Power track infeeds

provide the option of connecting the Thread system to the building power, either through the wall or through the floor. Infeed lengths are available from 24" to 144" in 12" increments and in single or dual circuit.

Available in single circuit and dual circuit.

Power track lengths are available from 24" to 144" in 12" increments. They connect to an infeed to distribute power. Power tracks can be ordered with ramps or with infills.

Connectors, four varieties: Blank low-profile (No power access), one-door low-profile (provides one access point utilizing Steelcase's proprietary low-profile plug), two-door low-profile (provides two access points utilizing Steelcase's proprietary low-profile plug), and the NEMA monument, which provides four standard three-prong plug (NEMA 5-15) receptacles. NEMA monument is available with standard and tamper resistant receptacles.

Power hub is available with a standard three-prong plug or Steelcase's proprietary low-profile plug. The hub provides a user interface for power that is off the floor and capable of moving around the space. It features an integrated cord wrap in the design of the base.

The Thread power hub provides six standard three-prong (NEMA 5-15) receptacles to provide power access where users need it. (indoor dry locations only).

The power hub is available in two heights, lounge height and desk height. The lounge height hub is 30" tall overall with the user interface starting at 22". The desk height hub is 37 1/8" tall overall with the user interface starting at 28".

Low-profile plug adapter is an 8 3/4" long adapter that allows a single three-prong plug to connect to Steelcase's proprietary low-profile connectors.

Proprietary low-profile plug can only be used with the Thread system and will not interface with existing receptacles. In order to achieve ADA compliance for connectors in an egress location, we developed our own plug design. *Note: Always consult your local inspector prior to purchasing the Thread system to ensure all local codes and ordinances are satisfied since local regulations may supersede those spelled out in the National Electric Code.*

Connections

The single circuit power track infeeds utilize three standard 12 gauge insulated wires encased in a riveted metal housing.

The dual circuit power track infeeds utilize three 12 gauge insulated wires along with a 10 gauge shared neutral wire.

All infeeds stand 1/4" off of the subfloor.

The infeed track comes with 12' of extra wiring to easily connect to the building power through a new or existing junction box. If longer infeed wiring is necessary, it may be submitted to specials.

Thread power track and power track infeeds are prefabricated modular tracks capable of distributing up to 20 amps of power per circuit and come in lengths of 24" to 144" in 12" increments. These tracks must be fastened to subfloor, but can be reconfigured or removed without leaving substantial damage to the subfloor like more permanent solutions do. Thread power track cannot be field cut.

► Please refer to page 218 for more information on applications and reconfiguration.

Each power track and infeed track comes with either two flexible ramps or two infills. The ramps ease the transition between the subfloor and the height of the track. These ramps simply rest on top of the track and do not need to be adhered or fastened. The infills rest within the track to create a smooth surface for the floor covering to be applied over. When ordering a power track and/or infeed track, you can specify the track and ramps or the track and infills, depending on your installation method determined by your flooring selection.

Standard three-prong plug

Low-profile plug

The cord is 5' long and is available with either a standard three-prong plug for use with standard receptacles or with Steelcase's proprietary low-profile plug for use with one-door and two-door low-profile connectors. Cord length can be changed to be 2-9' by ordering through Specials. The base only has the capacity to wrap 5' of cord within.

The metal connector cover on the low-profile connectors is a stamped, painted steel plate. This connector cover is ADA compliant for egress locations.

The low-profile connector doors are made of cast zinc. They are spring loaded and gasketed to ensure compliance with small liquid spill requirements. The system is not fully waterproof and is only acceptable for use indoors in dry locations.

The plastic trim ring is spring loaded to provide a tight fit against the flooring. It provides a simple ramp transition to the 1/2" maximum height of the connector cover and hides any imperfections in the access hole cut in the carpet.

NEMA connector is designed to accept most standard NEMA three-prong plug and cord orientations. If cord exits in a non-standard fashion, please check for fit before ordering. A low-profile connector and adapter should be utilized for non-standard configurations.

The NEMA monument is made of a two piece plastic housing that provides access to four standard three-prong receptacles. This connector is not ADA compliant for egress locations. NEMA monument is available with standard and tamper resistant receptacles. *Tip: When connecting the Verb active media table or Bivi to Thread, the NEMA tamper resistant monument orients receptacles in a way that allows additional plug orientations.*

When planning a power network, you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them. ► See page 218 for additional power planning information.

Thread, Power Track and Power Track Infeeds, continued

Technical Electrical Information and Power Planning

The Thread system is listed as a 20 amp branch circuit. It utilizes three standard 12 gauge wires (hot, neutral, and ground). When more than one circuit is required to support a space or application, additional circuits will need to be provided using Thread power track infeeds connected to other circuits in the building. The number of circuits available to pull from will be determined by building construction. Please consult your electrician if you are unsure of the building power capabilities.

Thread is designed to accommodate 20 amps per circuit. Amps x volts = watts. In the U.S., this means 2,400 watts of potential. However, most locations only allow for power planning of up to 80% of potential. For example, 2,400 watts x 80% is 1,920 watts. When planning, consider whether a single or dual circuit is needed based on power needs.

► See page 270 for *How to Calculate Power Needs*.

The Thread power track infeed begins with a universal connector that is capable of connecting to any standard 1/2" conduit or other listed product such as Wiremold or Conduit. The building electrical supply connection must be performed by a licensed electrician. Please consult with your electrician if you have questions regarding what type of conduit will be used.

Due to voltage drop, the National Electric Code (NEC) recommends that the distance between the building circuit box and the user access point not exceed 75–150 feet (depending on gauge of wires running from the building circuit box to the Thread infeed junction). Since the distance from the Thread infeed junction to the building circuit box may be difficult to ascertain, we recommend planning conservatively for the total distance of any individual Thread branch and keep it as short as possible. Thread branches longer than 70 feet per circuit may risk contributing to voltage drop exceeding acceptable levels.

Listing categories: Thread power track is listed as a multi-outlet assembly and is considered a 20 amp branch circuit, which means it meets the same requirements as the hard wire outlets in the wall. The power hub is listed as a relocatable power tap (RPT, which means it is treated the same as a typical power strip). The plug adapter is listed as an accessory to the Thread system.

UL 5 is the standard for multi-outlet assembly (which correlates to article 380 in the National Electric Code) and UL1363 is the standard for RPT, but has no direct correlation in the NEC.

The power hub has a circuit breaker in the base that is intended to trip should excessive power draw occur. If the total draw from all receptacles on a hub exceed 15 amps, the breaker will trip and a black button will pop out of the base where it meets the stalk. Pressing the black button back in will reset the circuit.

It is important to plan for expected power consumption in a given application to ensure enough infeeds are present to prevent tripping the circuit breaker either at a hub or at the building circuit box.

Building construction varies and there may be components hidden below the floor surface that must be avoided when drilling holes to anchor the power track infeed and power track. Sub-flooring, including concrete, may contain electrical wiring, structural cabling, radiant heating lines, etc. To avoid potential property damage or unsafe conditions, consult with the building architect or Engineer of Record to plan accordingly. The sub-floor can only have 1/8" of variance under where the Thread power track lies. If greater than 1/8", floor leveling is required.

The building electrical supply connection must be performed by a licensed electrician. Only connect this system to a dedicated 120-127 V~ 60Hz 20A single phase GFCI protected building power circuit.

Codes Information

Thread is UL certified as a multi-outlet assembly and not a manufactured wiring assembly. Manufactured wiring systems are defined in Article 604 of the NEC and provide very clear guidelines regarding construction methods. Thread is constructed in a manner not consistent with any defined method in this section of the NEC and because of this, cannot be considered a manufactured wiring system. It is consistent with the definition for multi-outlet assemblies as defined in Article 380.

NEC 210.71: This 2017 code requires that any habitable room of at least 215 sq. ft. must have at least two floor outlets no less than 6 ft. from the wall. One outlet is required for every 215 sq. ft. of space. Thread is a solution to this code.

The system is capable of distributing 20 amps of power. Power planning to 80% consumption means the system is not designed to deliver more than 16 amps total. Each connection point can only connect to one circuit at a time. Thread is compatible with 5-15 plug types, not 5-20 plug types.

The NEC does not permit plugging an extension cord or relocatable power tap (RPT) into another extension cord or RPT. Many of the power units embedded in furniture are listed as a RPT and, per the NEC, are required to be plugged into a building hardwired receptacle. The Thread cord adapter is a listed multi outlet accessory and as such, is not considered an RPT, extension cord or a building receptacle. We recommend the NEMA monument for any Thread application where furniture-hosted power will be plugged in but some may desire to use the low-profile connector with an adapter for this application. Please note that while it is not a safety hazard, a local inspector may not approve because of the definitions and restrictions mentioned above.

Thread is listed as a multi outlet assembly in accordance with Article 380 of the NEC; it is not a flat conductor cable system (FCC) as identified in Article 324. FCC is not permitted in education, healthcare, or residential facilities.

The intent of this requirement within the code is that outlets are not to be covered by carpet. The traditional multi outlet assembly design was covered with receptacles across the entire face and field wired. With that type of design, it is easy to understand it applies to the entire product. Thread is a new design, yet certified as a multi outlet assembly. The raceway is factory wired and able to be covered with carpet, but the connector/receptacle still cannot.

Track Configurations

Inline

L 90°

End of Run

T

X

Single Circuit and Dual Circuit

Infeed Circuit Types: Single circuit infeeds distribute the same circuit through all tracks and power access points. Dual circuit infeeds distribute one circuit at 90° and 180° from the infeed track. The second circuit is distributed at 270° from the infeed track.

Steelcase has recommended a maximum of 10 receptacle outlets to avoid code variation and Hub maximization.

- Blank covers do not count towards the total number of receptacles because no access points are present in this configuration.
- One door and two door low profile connectors each count as a single receptacle.
- NEMA monument counts as two receptacles.
- Hub counts as zero receptacles.
- cULus listed.

Thread, Power Track and Power Track Infeeds, continued

Applications

Floor Specifications

The Thread power distribution system is intended for indoor use/dry locations only. Each connector in the system will require a hole to be cut in the flooring to permit access to the system. This is true for every connection point, even if only using a blank cover where no power access is needed. For this reason, we strongly recommend carpet tile when carpet is used. See installation guide for tools and direction.

Flooring surface compatibility is dependent on which track solution is used. Track with ramps is designed for carpet only. Carpet tile is preferred over broadloom. Carpet thickness must be between 0.225" and 0.450". Track with infill is used for carpet and resilient tiled surfaces with conforming properties (most types of LVT meet these standards). Rely on the flooring provider to determine if the surface meets the needs of the system (ability to screw down the connectors without the surface breaking). Flooring thickness must be between 0.100" to 0.250" for both carpet and LVT.

Tracks with infill require a field-supplied 6 mm underlayment.

Each piece of Thread power track or power track infeed must be fastened to the subfloor using one screw at each end of the track and one additional screw every 48". This means for power tracks that are shorter than 48" only two screws are required. For tracks 60" to 96" in length, three screws are required and for tracks longer than 96", four screws are required. Connectors require additional screws in to the subfloor. The track itself has multiple holes to allow it to be screwed down and has many more holes than are needed. For example, at the end of each track you will find four holes placed closely together but only one screw needs to be used. The extra holes are available in case of a damaged screw or some form of interference in the subfloor (like a rock in concrete) that might prevent a hole from being used. The same is true for holes all the rest of the way down the track; there are holes on both sides of the track and they are placed approximately every 12" to provide multiple options in case of interference in the subfloor. Please see installation guide for detailed instructions regarding this topic, including recommended types of fasteners and locating pilot holes.

A wall power infeed may be installed perpendicular to a wall or at any angle between 45° and 135°. However, it should be noted that once the infeed track is installed, all subsequent track connections will be either inline or at right angles to this track. There is no ability to create an angled connection between two tracks. Please refer to the installation guide for detailed instructions and drawings.

The Thread system does have some flexibility to accommodate uneven floors, however flooring elevation changes greater than 1/8" must be filled in or sanded down to even out the surface. The area underneath and immediately surrounding a junction (connector of any type, including a blank) must be flat within 1/16" in a 9" radius from the center of the junction. The Thread system is not designed for use on raised floors, across building expansion joints, or in areas where it will be subject to constant or rolling loads heavier than people. Please refer to the installation guide for additional details.

For connectors that will be in an ADA defined egress location, in order for the low-profile connector to be considered ADA compliant, the floor thickness stated above must be followed. Thinner surfaces can be used but will leave gaps and will not be ADA compliant. Thicker surfaces than stated are incompatible.

The length of a track is measured from the center of one connector to the center of another connector; a 24" power track by itself may not be precisely 24". This is intended to simplify planning and layouts.

Note: While this system has been developed to minimize its impact on the physical environment and to work with a broad range of existing furniture, certain conditions exist that may create undesirable interactions with other products. One example is the use of sled-base chairs since it may not sit flat when interacting with the track or connectors. Chairs utilizing pneumatic cylinders with minimum clearance of less than 1/2" should be used with care as the bottom of the cylinder can catch on a connector cover or on the slightly raised profile of the track beneath the carpet. Steelcase always strives to exceed the 1/2" clearance on our seating products but if you identify a seating product that does not have this level of clearance, a spacer ring is available from our service parts that can be placed between the cylinder and the base to increase the clearance. Please see part number 895446201SR in the Service Parts catalog, or part number 895446201MP for a quantity of 10 spacers.

Notice Regarding Installation: Thread must be anchored to the building floor for safe and proper use. Building construction varies and there may be components hidden below the floor surface that must be avoided when drilling holes to anchor the power track infeed and power track. Subflooring, including concrete, may contain electrical wiring, structural cabling, radiant heating lines, etc. To avoid potential property damage or unsafe conditions, consult with the building's architect or Engineer of Record to plan accordingly.

Understanding Modular Power

	
Statement of Line	234

Product Details	
Modular Power	235

Statement of Line

Modular Power

Modular components

provide branch circuit power distribution through a raised access floor or above a suspended ceiling. Eight, #10 gauge AWG conductors can be configured as 3+1, 2+2, or 3 circuits with separate neutrals.

Modular Power

Modular-to-Hardwire Harnesses

► Specifying, page 242

Product Details

Modular-to-hardwire harness routes power from the building power source to modular components or to provide power to a customer-supplied device. It can be used either above a suspended ceiling or below a raised floor.

Connections

Modular connector located on one end of the harness connects to a modular extension harness or transition harness, using a harness-to-harness connector, or to a branching connector or access box.

Surface Materials

Modular-to-hardwire harness is concealed when it is properly installed.

Actual Dimensions

Lengths 5', 10', 30', and 50'

Modular Extension Harnesses

► Specifying, page 243

Product Details

Modular extension harness routes power from three-way branching connectors or lengthens the overall harness distance by using harness-to-harness connectors.

Modular extension harnesses can be connected or disconnected as needed with:

- Architectural Solutions Modular Power
- Answer
- Montage

Connections

Modular connectors located on each end of the modular extension harness, allow the harness to be relocated as power needs change.

Two modular extension harnesses can be connected together to extend the length by using a harness-to-harness connector.

Surface Materials

Harness is concealed when it is properly installed.

Actual Dimensions

Modular extension harness
Lengths 5', 10', 20', 30', 40', and 50'

Modular Connector Faceplates

► Specifying, page 244

Product Details

Modular connection faceplate provides a way to add a modular connection to a junction box. Faceplate available with a flush or 90° connection.

Connections

Faceplate is attached to junction box with screws. Hardwire connection to power source within conventional 4 1/16" x 4 1/16" x 6" junction box is completed by electrician in the field. Modular extension harness can be connected or disconnected from faceplate as needed.

Surface Materials

Faceplate is zinc-plated steel. Modular connector is black plastic for 3+1, brown plastic for 2+2, and rust plastic for 3 circuits with separate neutrals.

Actual Dimensions

Depth 4 1/16"
Width 4 1/16"
Height 6"

Modular Power, continued

Zone Boxes

► Specifying, page 245

Product Details

Zone box includes an infeed harness to allow electrical connection to a circuit breaker box. Zone box includes three modular output connection points for power distribution for 10-gauge zone boxes, and two modular output connection points for 8-gauge zone boxes.

Connections

Zone boxes have either two or three output connection points. For 4-circuit, 3+1 and 2+2 configurations, twelve circuits are distributed to provide four circuits at each of the three connection points for 10-gauge zone boxes. For 8-gauge zone boxes, 8 circuits are distributed to provide four circuits at each of the two connection points. For 3-circuit, separate neutrals or configurations, nine circuits are distributed to provide three circuits at each of the three connection points for 10-gauge zone boxes and six circuits are distributed to provide three circuits at each end of the two connection points for 8-gauge zone boxes.

Surface Materials

Zone box is concealed when it is properly installed.

Actual Dimensions

Depth	11"
Width	10½"
Height	17⁄8"

Hardwired Zone Boxes

► Specifying, page 245

Product Details

Hardwired zone box is designed to be hardwired to power source by the electrician in the field.

Boxes that will be wired up to 150 feet have three output connection points (maximum of 12 circuits). Boxes that will be wired 150 feet up to a maximum of 200 feet have two output connection points (maximum of 8 circuits). All connectors are pre-wired to terminal base inside the box.

Connections

Connection from terminal bars to the circuit-breaker box should be done by a qualified electrician using 10-gauge wire for 12-circuit boxes and 8-gauge wire for 8-circuit boxes.

Boxes that have three output connectors can be 3+1, 2+2, or 3 circuits with separate neutrals. The 3+1 and 2+2 systems have a total of 12 circuits—four circuits at each connector. The 3 circuits with separate neutrals system has a total of nine circuits—three at each connector.

Boxes that have two output connectors can be 3+1, 2+2, or 3 circuits with separate neutrals. The 3+1 and 2+2 systems have a total of 8 circuits—four circuits at each connector. The 3 circuits with separate neutrals system has a total of six circuits—three at each connector.

Surface Materials

Hardwired zone box is concealed when it is properly installed.

Actual Dimensions

Depth	11"
Width	10½"
Height	17⁄8"

Three-Way Branching Connectors

► Specifying, page 246

Product Details

Three-way branching connector has one power-infeed and three modular connection points for power distribution.

Connections

Three-way branching connector can route power to daisy chain power components such as floor boxes.

Surface Materials

Three-way branching connector is concealed beneath Architectural Solutions Low-Profile Floor when it is properly installed.

Actual Dimensions

Depth	2 ⁵ / ₈ "
Width	1 ¹ / ₂ "
Height	1 ³ / ₄ "

Harness-to-Harness Connectors

► Specifying, page 246

Product Details

Harness-to-harness connector has one power-infeed and one modular connection point for power distribution.

Connections

Harness-to-harness connectors join modular harnesses together to lengthen the overall harness distance.

Surface Materials

Harness-to-harness connector is concealed beneath the floor when it is properly installed.

Actual Dimensions

Depth	2 ⁵ / ₈ "
Width	1 ¹ / ₂ "
Height	1"

Transition Harnesses for Floor Power-Infeed or Base Power-In

► Specifying, page 248

Product Details

Transition harness modularly connects the Modular Power system to Internode power kits. It also connects to Answer and Montage in place of a standard base power-in.

Connections

Modular connector to connect to compatible system is included on one end of the transition harness.

Surface Materials

Transition harness is concealed beneath the floor when it is properly installed.

Power transition cover
• Black plastic

Actual Dimensions

Power harness length	6'
Infeed harness length	3'

Modular Power, continued

Shallow Floor Access Boxes

Shallow floor access box

► Specifying, page 251

Shallow floor access box for hardwire connection

► Specifying, page 252

Product Details

Shallow floor access box includes a modular power block accepting two receptacles. Modular power block is available in three keying options, 3+1, and 3-circuit, separate neutrals. Receptacle is specified separately for different lines and accommodates two modular furniture faceplates for communication outlets. A modular extension harness, ordered separately, of any length will connect to the shallow floor access box.

Shallow floor access box for hardwire connection includes two duplex receptacle openings. Decora-style receptacles must be supplied in the field.

Shallow floor access boxes should be used with Low-Profile Floor and raised floors 2½"H or higher.

Connections

Shallow access box for hardwire connection can be used with a hardwire extension harness.

Surface Materials

Shallow floor access box lid

- Black zinc

Actual Dimensions

Depth	11½"
Width	11½"
Height	2½"

Floor Access Boxes

Floor access box

► Specifying, page 251

Product Details

Floor access box includes a modular power block accepting four receptacles—two on each side of the block. Modular power block is available in three keying options, 3+1, 2+2, and 3-circuit separate neutrals. Receptacle is specified separately for different lines and accommodates two NEMA single-gang outlet faceplates. A modular extension harness, ordered separately, of any length will connect to the shallow floor access box.

Floor access boxes should be used with raised floors 5"H or higher.

Surface Materials

Floor access box lid

- Black zinc

Actual Dimensions

Depth	11½"
Width	11½"
Height	4½"

Modular Receptacles

► Specifying, page 253

Product Details

15-amp duplex receptacles, ordered separately, are field installed inside floor access boxes. System ground and isolated ground receptacles are available to connect to 15-amp systems.
Tip: Receptacle faces are 3/8" nominal height except separate neutral wiring schematic.

Controlled receptacle must be indicated when tying into the building management system. Duplex receptacles have an option for a factory permanent, pad stamp power icon symbol with the word controlled per compliance with the Energy Code.

Connections

Modular receptacles snap into the power block in floor access boxes.

Surface Materials

Modular receptacles

- Black plastic

Actual Dimensions

Depth	3/4"	3/8"
Width	37/16"	13/4"
Height	37/16"	13/4"

Surface Materials

Surface Materials	256
Availability Matrices	260

Surface Materials

This listing includes all the surface material choices that are available for the products in this specification guide.

Tip: See Availability Matrices on page 260 for exact surface material availability on each Privacy Wall component.

Resources

For more information about surface materials, refer to the following resources:

Additional surface materials specification tools are available to assist you in the specification process—the Surface Materials Binders.

The global surface materials palette is a core collection of finishes that is available across multiple geographies (Americas/EMEA – Europe, Middle East, and Africa/ APAC – Asia Pacific) and on global product lines, where applicable. For a list of finishes included in the offering, see the *Surface Materials Reference Manual*. Additional details, like product approvals by geography and finish number conversions, can also be found in the *Surface Materials Reference Manual* or see steelcase.com/surface-materials.

Wood

Applies to:

- Privacy Wall door

Steelcase carefully selects veneer and solid wood for consistent color and grain structure. Wood is a natural material and variations will occur in color, grain and texture. These variations are part of the inherent natural beauty of wood and are not considered defects.

All wood products will darken with age and exposure to ultraviolet light. This is especially apparent with cherry and maple veneer. We recommend that desk accessories be rearranged periodically to ensure even aging of wood surfaces.

When storing your wood furniture, please follow the following guidelines:

- Do not store products in trailers
- Store products in areas that simulate office temperatures (60°F to 90°F)
- Store products in areas that maintain constant, office-like humidity levels
- Keep product away from light. Cover products to make sure they are not exposed to light.

Steelcase Surfaces

Veneers are matched for proper balance and consistency. Veneers are available flat cut or quarter cut, except for Oak, which is rift cut. Refer to the *Surface Materials Reference Manual* for descriptions of each cut.

Open-pore finish is a medium gloss finish that leaves the wood grain texture visible to the eye and distinguishable to the touch.

E = Excluded

Veneer

Wood Group 1

Flat-Cut Open-Pore

- 3062 FC/OP Graphite Walnut
- 3402 FC/OP Clear Cherry (Aged)
- 3412 FC/OP Natural Cherry **E**
- 3422 FC/OP Medium Cherry
- 3522 FC/OP Clear Maple
- 3592 FC/OP Blonde on Maple **E**
- 3702 FC/OP Clear Walnut
- 3712 FC/OP Natural Walnut
- 3752 FC/OP Medium Walnut **E**
- 3762 FC/OP Dark Walnut
- 3772 FC/OP Medium Mahogany on Walnut

Flat-Cut Open-Pore, Natural Veneer

- 3342 FC/OP Black Walnut
- 35A2 FC/OP Blanch Maple
- 37A2 FC/OP Thunder Walnut

Quarter-Cut Open-Pore

- 3042 QC/OP Ash **E**
- 3222 QC/OP Clear Maple
- 3292 QC/OP Blonde on Maple **E**
- 3302 QC/OP Clear Walnut
- 3312 QC/OP Natural Walnut
- 3352 QC/OP Medium Walnut **E**
- 3362 QC/OP Dark Walnut
- 3372 QC/OP Medium Mahogany on Walnut
- 3382 QC/OP Graphite Walnut

Quarter-Cut Open-Pore, Natural Veneer

- 32A2 QC/OP Blanch Maple
- 33A2 QC/OP Thunder Walnut
- 3392 QC/OP Black Walnut

Rift-Cut Open-Pore

- 3602 RC/OP Desert Oak

Rift-Cut Full-Fill, Natural Veneer

- 36A2 RC/OP Volcanic Oak

Wood Group 3

Flat-Cut Open-Pore, Natural Veneer

- 3082 FC/OP Washed Walnut

Quarter-Cut Open-Pore, Natural Veneer

- 3832 QC/OP Figured Anegre

Wood Group 1

Open-Pore Planked Veneer

- 3P41 OP Planked Cherry
- 3P51 OP Planked Maple
- 3P61 OP Planked Oak
- 3P71 OP Planked Walnut
- 3VFX OP Unmarked Oak

Tip: Known for its uniqueness, planked veneer has intentional and natural variations that include, but are not limited to: character marks, grain pattern, color, and natural color aging.

E = Excluded

Custom Surfaces

Customiz stain is a service that allows you to create your own stain colors and finishes on standard veneer. Customiz stain color is available on all product lines that offer wood veneer.

A \$500 stain-matching fee applies on CUSTOMIZ requests (Exception: The \$500 fee does not apply on matches to Coalesse standard finishes or for a low-gloss finish request on a standard color). The \$500 fee covers the cost of formulating the Customiz color finish and applies regardless of whether or not an order for product is placed.

In addition, an approval form must be signed to indicate customer acceptance of Customiz match. A \$1,500 initiation fee will be charged prior to first order entry. This initiation fee activates the finish for unlimited use on any Steelcase product for an 18 month time period. After the 18 month time period has lapsed, the Customiz finish may be reactivated for another 18 months for a \$1,000 fee at any point within five years after the \$1,500 initiation fee was paid. If the finish is not reactivated within five years after the \$1,500 initiation fee was paid, the finish will be culled and the customer will need to pay the \$1,500 initiation fee again. All style number related Customiz charges products are no cost as of April 2014. The matching and initiation fees are not discountable.

Customiz stain takes 10 days to formulate. Consult the *Surface Materials Reference Manual* for more information. Custom veneers are also available and must be quoted by Steelcase specials group. Customiz stain on custom veneers takes 2 to 4 weeks to formulate.

Requirements and information on ordering a Customiz stain color are found in the *Surface Materials Reference Manual*.

Plastic

Steelcase Surfaces

Applies to:

- Privacy Wall receptacle and cover plate
- Privacy Wall power and communication filler

- 6000 Black
- 6009 Arctic White
- 6249 Platinum Solid

Wiring Schematics

Details for the Electrician

Modular power components are offered in three different wiring schematics to allow you to match your specific wiring strategy to any typical building wiring plan.

Tip: All the components in an electrical system must use the same wiring schematic. The components are color coded and keyed to make it impossible to connect mismatched parts.

Black = Four-circuit, 3+1

Brown = Four-circuit, 2+2

Rust = Three-circuit, separate neutrals

Shared neutral conductors = 10 gauge

Separate neutral conductors = 10 gauge

Hot conductors = 10 gauge

Grounding conductors = 10 gauge

Four-Circuit, 3+1

Circuit Panel 1

Circuit Panel 2

In the four-circuit 3+1 schematic, circuits 1, 2, and 3 are distributed from the first circuit panel and are supported with one shared neutral and one shared ground. Circuit 4 is distributed from a second circuit panel and is supported with a separate neutral and ground.

Single 3-Phase
Circuit Panel

On a single 3-phase circuit panel, all four circuits are distributed as shown.

Four-Circuit, 2+2

Circuit Panel 1

Circuit Panel 2

In the four-circuit 2+2 schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel and are supported with one shared neutral and one shared ground. Circuits 3 and 4 are distributed from a second circuit panel and supported by their own shared neutral and ground.

Single 3-Phase
Circuit Panel

On a single 3-phase circuit panel, all four circuits are distributed as shown.

Split-Phase
Circuit Panel

On a split-phase circuit panel, all four circuits are distributed as shown.

Three-Circuit, Separate Neutrals

Circuit Panel 1

Circuit Panel 2

In the three-circuit, separate neutral schematic, circuits 1 and 2 are distributed from two different phases from the first circuit panel. Each circuit is supported with its own neutral and a common ground. Circuit 3 is distributed from the second circuit panel and is supported by its own neutral and ground.

Single 3-Phase
Circuit Panel

On a single 3-phase circuit panel, three circuits are distributed as shown.

Split-Phase
Circuit Panel

On a split-phase circuit panel, three circuits are distributed as shown.

Locations with Special Requirements

Locations with
Special Requirements

Local electrical codes

vary. Consult a qualified electrical contractor or engineer for the proper installation of all electrical components. Here are the special conditions for the cities of Chicago, New York, Los Angeles, and San Francisco.

Chicago

Chicago electrical code requires the power distribution network to be hardwired on site. There are no hardwired versions of Internode or Modular Power.

Architectural Solutions Low-Profile Floor can accommodate hardwiring using the standard conduit, wires, junction boxes, and receptacles that electrician's routinely use.

New York City

Privacy Wall modular power components, Architectural Solutions modular power, and Internode modular components are not approved for use in NYC.

Los Angeles

All modular power components are acceptable for use in Los Angeles. Cord-connected power connections are not acceptable. Wire and cable managers are not approved for use in Los Angeles.

San Francisco

Internode components are not approved for use in the city of San Francisco.

Architectural Solutions Low-Profile Floor can accommodate hardwiring using the standard conduit, wires, junction boxes, and receptacles that electrician's routinely use.

How to Calculate Power Needs

Use This to Determine How Many Power-Ins You'll Need

When planning a power network, you must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

If your usage is not known in advance:

The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. This provides up to 30 receptacles for each 3-circuit power-in.

If your usage is known in advance:

Add up the amperage used by each piece of equipment in the workstation. Whenever you reach 60 amps (20 amps times 3 circuits) from items that are likely to be used at the same time, you have reached the limit for a single power-in. Specify another power-in and continue until all equipment is powered.

If the circuits will normally be subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires that circuit capacity be "de-rated" by 20 percent. Therefore, treat circuits used for continuous loads as if they were rated at 16 amps instead of the regular 20 amps.

Try to anticipate future increases in power requirements and build some excess capacity into your plan.

► See table at right for typical and actual amperage usages for components.

To calculate amperage when the wattage of a device is known, divide watts by 120.

Some appliances, such as large copiers, coffee makers, or space heaters require most of the current available on a 20-amp circuit. It is recommended that such devices be supplied with their own receptacle/circuit, directly from the building. This leaves the capacity of the furniture circuits available for the more dynamic requirements of the office equipment.

Local electrical codes vary. Consult a qualified electrical contractor or engineer for the proper planning of electrical circuits in your locale.

Approximate power consumption for common devices

• Device	• Wattage	• Amperage	• Voltage	• Number of Devices Supported on Single 20 Amp Circuit
Laptop (Low)	30	0.25	120	64
Laptop (High)	100	0.83	120	19
CPU/Desktop Computer (Low)	65	0.54	120	30
