FAUCET OPERATION

1. A continuous, invisible light beam is emitted from the OPTIMA® sensor.
2. The faucet is activated by placing hands beneath the spray head, thus activating the Solenoid Valve. Tempered water flows for as long as hands continue to stay within the Sensor's range (30 second automatic shut off).
3. When hands are removed, the water flow automatically stops. The faucet is then ready for the next user.

SOAP DISPENSER OPERATION

The user's hands reflect the beam into the sensor receiver activating the pump allowing a single soap application to flow from the spout. A flashing red LED indicates the soap cartridge is low. A flashing yellow LED indicates low batteries.
